The Elastic Search Platform

Accelerate results that matter with the Power of Search

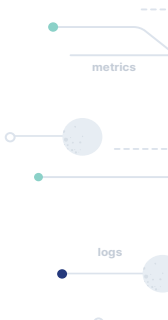

elastic

We live on an always on world characterized by real challenges.

Given exponential data growth, most organization have massive amounts of information scattered across multiple environments — making it difficult for your customers and employees to find exactly what they need, when they need it.

Rising user expectations and an accelerated pace of technological change has led to increasingly complex IT environments — making it challenging for your IT teams to quickly find and respond to issues.

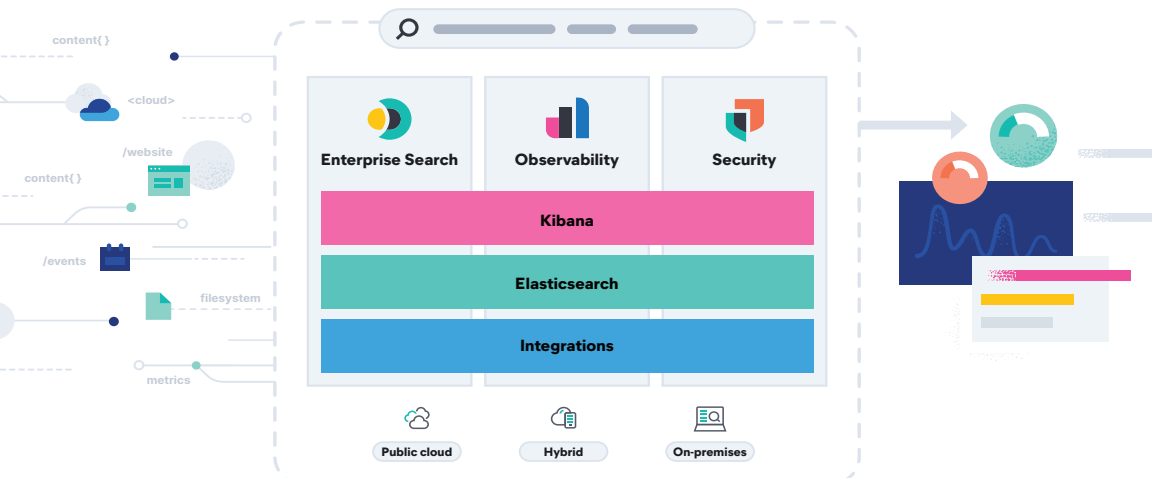

As IT infrastructure becomes more distributed across public, private, and hybrid environments, so too does your attack surface — making it near impossible for your security teams to prevent and detect (and respond to) increasingly sophisticated cyber attacks.

Behind each of these challenges the common denominator is data. Business data. IT data. Security data. However, despite a proliferation of new tools and solutions to address these challenges, organizations are still struggling to efficiently extract value - in real time - from this ever growing mountain of data.

Meet the Elastic Search Platform. 1 platform with 3 built-in solutions.

The Elastic Search Platform transforms “the big problem with data” into a lucrative opportunity to put this data work. In short, it solves for multiple business challenges with one solution and is enabling the world’s leading organizations to put all of their data to work with the power of search.

One data analytics platform, with three built-in, search-powered solutions.

The Elastic Search Platform is an all-in-one data store, search engine, and analytics solution. It’s able to ingest, store, search, and analyze data of any type, from any source, and provide insights in milliseconds (or less).

Search connects the dots between your use cases, teams, and data.

Are your internal and external users having difficulty accessing information from your application or website? Are your SREs trying to determine why a certain datacenter just went offline? Are your security analysts trying to remedy a newfound security breach?

Connect people and teams with content that matters

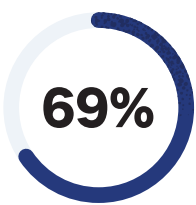

Monitor and react to events happening anywhere

Prevent, detect, and respond to threats

What if these were all related events? More often than not - they ARE related.
And the Elastic Search Platform is what enables you to connect the dots and work across use cases and business challenges, and, ultimately, to put your data to work.

See how Elastic is helping companies around the world transform their data into results that matter with the power of search.

TECHNOLOGY	FINANCE	TELCO	CONSUMER	AUTOMOTIVE/ TRANSPORTATION	RETAIL
Adobe	BARCLAYS	orange	Uber	VOLVO Volvo Group	H-E-B
CISCO	ZURICH	SoftBank	Grab	AIRBUS	The Home Depot
workday	USAA	verizon	tinder	Travelport	ebay
Microsoft	collector bank	T-Mobile	Activision Blizzard		Walgreens

Improvement in customer and employee satisfaction

Improvement in application and service resilience

Reduction in risk

What results will you accelerate with the power of search today?
