CDW

Smartsheet for Healthcare and Life Sciences

Increase efficiency and deliver better patient experiences

Trusted by healthcare organizations globally

30% increase in efficiency

University of Utah automated processes to improve collaboration and increase efficiency

40% boost in productivity

Roche replaced inefficient systems to better manage COVID-19 test distribution

30+ hours saved per week

NHS reduced time spent on financial reports from an entire day to just 10 minutes

Key Functionality

1 Improve visibility and collaboration across teams

Collaborate among teams, unify work across the organization and provide the visibility stakeholders need to ensure progress, compliance, and patient satisfaction.

2 Streamline operations to save time and money

Automate workflows and align resources to increase operational efficiency and reduce the burden of administrative tasks so your staff can focus on the work that matters most.

3 Securely collect and share protected health information

Apply security and data governance controls to protect your most sensitive data and comply with regulatory and industry standards, including HIPAA, GxP, and GDPR.

Here are just a few ideas of what you can achieve with Smartsheet.

Hospitals & Clinics
Get visibility into needs across your organization

Optimize your Hospital PMO
Formalize processes across the organization, ensuring secure methods to manage sensitive data. Streamline complex workflows to effortlessly scale projects to programs and portfolios.

Manage Inventory & Supplies
Whether managing PPE, vaccines for hospital workers or medical supplies across locations, Smartsheet can help centralize real-time information to best serve your patients and your medical teams.

Organize Healthcare Provider Credentials
Securely track and manage physician certifications and licenses to ensure that all credentials and insurance information are current.

Pharmaceuticals & Biotech
Get groundbreaking drugs to market faster

Speed up Clinical Trials and Tests
Create a standard process for clinical trial protocol review and approval, testing procedures and trial management. Gain a global view of your entire trial portfolio, and drill down into real-time status of disease area testing projects.

Manage Regulatory Compliance and Management
Ensure compliance with flexible solutions for regulatory or IP submission tracking, FDA approval tracking, as well as real-time information for auditors, oversight committees, and internal compliance-related initiatives.

Streamline Mergers and Acquisitions
Accelerate target and pre-deal evaluations, streamline due diligence while managing multiple workstreams, with greater visibility and consistency in processes.

Medical Device Manufacturing
More efficiently achieve your targets

Stand Up Production Calendars and Communications
Improve inventory management and eliminate flow disruptions with production calendars and reports, communicate with vendors, and identify opportunities for continuous improvement.

Increase Compliance Visibility and Tracking
Enhance global production visibility, simplify and automate compliance and regulatory processes, and streamline worker access to important documentation.

Improve Implementation
Create a structured, disciplined process for implementations that allows you to centralize information, plan and track implementations, and automate routine work to maximize uptime for your customers.
