

Stop guessing where AI fits. Start deploying agents that work.

Agentic Value Realization (AVR) for Google Gemini Enterprise

The rollout of Google Gemini Enterprise gives organizations powerful AI capabilities — but success depends on identifying the right use cases and deploying them with proper governance. CDW's Agentic Value Realization (AVR) removes the guesswork by evaluating your business needs against hundreds of pre-mapped enterprise scenarios to rapidly identify, score and model custom AI agent workflows. Through a free, one-hour discovery workshop, CDW AI consultants map your business needs against an extensive agentic use case database across 20 industries — scoring, prioritizing and prototyping the highest-value opportunities. Within 24 hours, customers receive 2-5 identified use cases with associated complexity scores, potential ROI and associated agentic demo summaries.

Agentic Value Realization (AVR) for Google Gemini Enterprise can help you achieve agentic:

**Employee
Enablement**

**Workflow
Optimization**

**Proprietary
Innovation**

Finding the Right Solution

Finding the right agentic AI path is not just about choosing a strong use case — it also requires understanding the complexity behind how that agent will connect, be built and operate securely. CDW's Agentic Value Realization (AVR) offering evaluates each opportunity across three critical dimensions:

- **Connector type complexity**, from GWS native connectors to third-party, live API, cloud data platform, non-GA or custom connector requirements.
- **Agentic tooling complexity**, ranging from Agent Garden prebuilt options and Agent Designer no-code builds to Agent Studio low-code, ADK code-first and custom development paths.
- **Data privacy and security boundaries**, including whether the data lives in a Workspace tenant, internal corporate systems, core enterprise platforms, external multi-tenant environments or regulated datasets.

CDW is best-in-class to deliver this offering due to our deep practice-level expertise in Google Cloud environments, bridging the gap between new adopters and mature developers. Deliverables included with this offering feature a customized complexity score, an initial ROI/licensing analysis, top prioritized agentic use cases, a live contextual demo and a prototype-ready SOW delivered within 24 hours.

- **Google Cloud Premier Partner:** Validated delivery capabilities across Google Cloud and Google Workspace platforms.
- **Google Workspace Authorized Reseller:** Fully certified to sell, deploy and support Google Workspace enterprise editions and Gemini Enterprise SKUs.
- **Google Cloud Professional Security Engineers:** Specialized practitioners available to guide secure identity and AI data governance controls.
- **Established AI and Cloud Practice:** Dedicated engineering team experienced in Gemini Enterprise integrations, Agent Builder and custom agent workflows.

CDW + GOOGLE CLOUD

CDW brings a deep, practice-level partnership with Google Cloud, offering certified Google Cloud and Workspace specialists who understand how data governance, security controls and agentic AI workloads intersect in enterprise environments.

- **Accelerated time-to-value:** Moves from initial introduction to a prototype-ready SOW in under 60 minutes.
- **Massive industry library:** Maps customer needs against a proprietary database of hundreds of enterprise use cases.
- **Transparent complexity modeling:** Evaluates technical dependencies upfront to manage implementation expectations.
- **Dual-track adaptability:** Tailors deployment strategies for both no-code business teams and advanced developer workflows.
- **Defensible business cases:** Ties every agentic prototype directly to clear ROI and Gemini Enterprise licensing benefits.
