ESET Cloud Office Security dashboard

What is **ESET Cloud Office Security?**

ESET Cloud Office Security provides advanced preventive protection for Microsoft 365 applications.

Its combination of spam filtering, anti-malware scanning and anti-phishing helps to protect your company communication and cloud storage. Our easy-to-use cloud console gives you an overview of detected items and immediately notifies you when detections occur.

Protect your collaboration tools

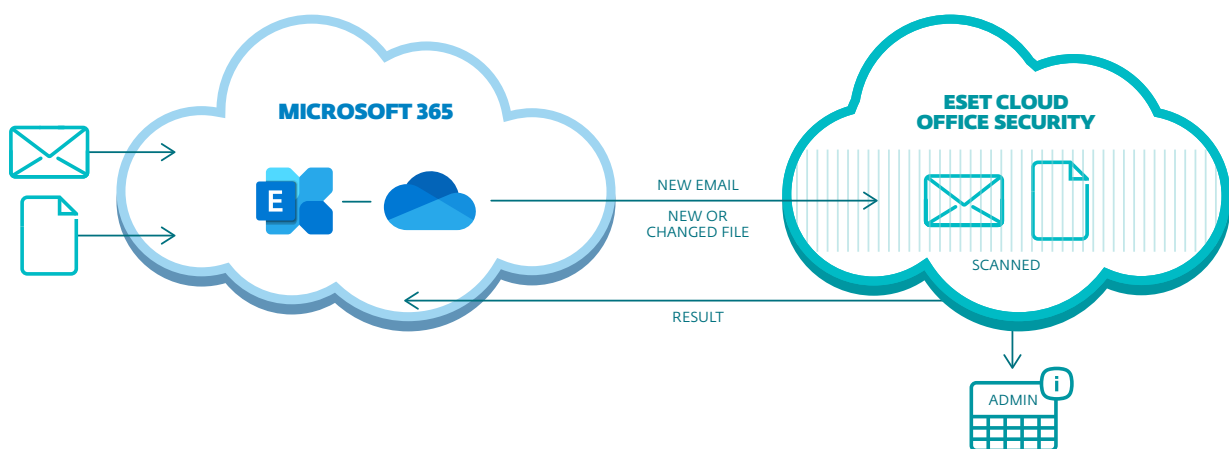

This combination of spam filtering, anti-malware scanning and anti-phishing protects your Microsoft 365 tenant.

Furthermore, anti-malware protection scans new or changed files in OneDrive, keeping your company's OneDrive clean and removing any opportunity for malware to spread to other devices.

This product is delivered as a service, with a dedicated management web-console that's accessible anywhere.

- Ensures infection-free company communications
- Minimizes adverse effects of unsolicited messages on everyday productivity
- Prevents incoming external emails being used as a channel for targeted attacks

How it works

Use cases

PROBLEM

A company owner wants to apply specific measures to minimize cybersecurity risks and maintain business continuity.

SOLUTION

- ✓ The company admin can inspect the amount of spam, malware or phishing emails detected by ECOS, and identify which users are most frequently targeted by malicious emails.
- ✓ The admin can observe at which times most spam is received by the company.
- ✓ Based on this these data and insights, the admin is able to prepare a report with relevant information for executives.

PROBLEM

Frequent exchange of large files on company cloud storage between internal and external people.

SOLUTION

- ✓ Sensitive company data on OneDrive need to be protected with an additional layer of security.
- ✓ The admin can activate a third-party cloud security solution such as ESET Cloud Office Security to protect the company's Microsoft 365 apps.
- ✓ A powerful anti-malware engine scans all new and changed files and prevents the spread of malware through OneDrive across multiple devices.

PROBLEM

Dangerous ransomware is currently attracting publicity.

SOLUTION

- ✓ The admin knows the file hash or name of the infiltration he wants to identify.
- ✓ The admin uses this to filter options for detection.
- ✓ ESET Cloud Office Security identifies users who may have been affected by the threat.

PROBLEM

The needs of a specific group of employees must be balanced with the need to keep the company secure.

SOLUTION

- ✓ The admin can configure different protection settings for each unit, or even per user.
- ✓ So if a small team in the company wants to receive emails important for their work (e.g. marketing newsletters), the admin can set up a policy and disable antispam for this group.
- ✓ The company remains protected against malware, and the majority of employees don't receive any spam.

Protect emails in Exchange Online and files in OneDrive cloud storage

ANTI-SPAM

Now using an enhanced, award-winning engine with improved performance, this essential component filters all spam emails and keeps user mailboxes free of unsolicited or undesired messages.

ANTI-PHISHING

Prevents users from accessing web pages that are known to be phishing sites. Email messages can contain links that lead to phishing webpages. ESET Cloud Office Security searches the message body and the subject of incoming email messages to identify such links (URLs). The links are compared against a database of known phishing links, which is updated constantly.

ANTI-MALWARE

Scans all incoming emails and attachments as well as all new and changed files. This helps to keep users' mailboxes free of malware and prevents the spread of malware through cloud storage across multiple devices.

QUARANTINE MANAGER

Admins can inspect objects in this storage section and decide to delete or release them. This feature offers simple management of emails and files that have been quarantined by our security product. On top of that, admins can download quarantined items and investigate them with other tools locally.

AUTOMATIC PROTECTION

With this option enabled, admins can be sure that new users created within the Microsoft 365 tenant will be automatically protected without the need to go to the console to add them separately.

NOTIFICATIONS

Notifications greatly improve admins' efficiency by removing the need to constantly check the dashboard. When a potentially suspicious new activity is detected within ESET Cloud Office Security, it can send out an email to notify admins or users so that they are immediately made aware of the threat.
