

WatchGuard Open MDR

WatchGuard Open MDR delivers enterprise-grade Managed Detection and Response that works with existing security investments. The MDR service integrates with supported third-party and WatchGuard security tools to extend protection across endpoint, identity, network, and cloud environments.

Why Your Business Needs MDR

Most organizations already have solid security tools, but tools alone can't watch your environment nonstop or take action the moment something suspicious happens. MDR fills that gap by adding continuous monitoring, expert investigation, and fast response.

It gives you the protection of a full security team without needing to build one.

What MDR Delivers

Security That Never Clocks Out

A dedicated SOC monitors your endpoints, network, and cloud activity day and night to stop threats as they appear.

One Clear Picture of Your Security

Instead of scattered alerts from separate tools, MDR unifies activity from endpoint, identity, cloud, and network sources into one view so issues are easy to understand and fix.

Response That Happens in Minutes, Not Hours

Automation isolates compromised devices, blocks malicious traffic, and disables risky accounts so threats are contained quickly. False positives drop, and you only hear about what truly matters.

Experts Who Find What Tools Miss

Security analysts investigate strange behavior and look for hidden activity that automated tools might miss, helping catch early-stage attacks.

Where Open MDR Fits

Many businesses rely on tools like Microsoft Defender, CrowdStrike Falcon Insight, Okta Workforce Identity, third-party firewalls, or multi-cloud environments. Open MDR brings all of these together under one MDR service without requiring you to switch platforms or replace what you already use. It integrates both supported third-party and WatchGuard tools to extend protection across endpoint, identity, network, and cloud systems.

It strengthens the investments you already have and turns them into a coordinated, around-the-clock defense.

What This Means for You

MDR gives your business the security expertise and nonstop monitoring you can't get from tools alone, and Open MDR makes that protection easier to adopt by working with the technology you already trust.

- Strong protection without hiring extra staff
- One service watching your entire environment
- Faster, more accurate response
- Less noise and fewer distractions
- No need to replace your current tools
