

# Unify IT to Simplify Work

ninjaOne®

NinjaOne has been recognized as a Leader in the Gartner® Magic Quadrant™ for Endpoint Management. We believe this placement reflects the impact NinjaOne's unified and automated endpoint management platform is having on the organizations we serve every day.

## NinjaOne built for the endpoint era

In a world where everything is an endpoint, NinjaOne leads the way with a unified IT operations platform that reduces complexity and enables IT teams to do more with less. Key benefits of NinjaOne include:

### Scalable architecture for distributed environments

NinjaOne's cloud-native design with built-in multi-tenancy supports fast onboarding, centralized management, and reliable operations across any environment.

### Unified IT operations platform

NinjaOne delivers unified management for mobile devices, desktops, servers, and virtual machines, supporting Windows, macOS, and Linux across networking and remote environments.

### Autonomous IT frees teams from manual tasks

NinjaOne elevates IT from reactive operations to a strategic driver of growth, using automation to reduce risk, increase efficiency, and improve the user experience.

### Proven customer satisfaction and rapid time to value

Even lean teams deploy NinjaOne in days, not months, and achieve results quickly due to an intuitive interface and streamlined workflows.

## Why this matters for organizations

We believe the Gartner recognition as a Leader reinforces the value customers gain from NinjaOne:

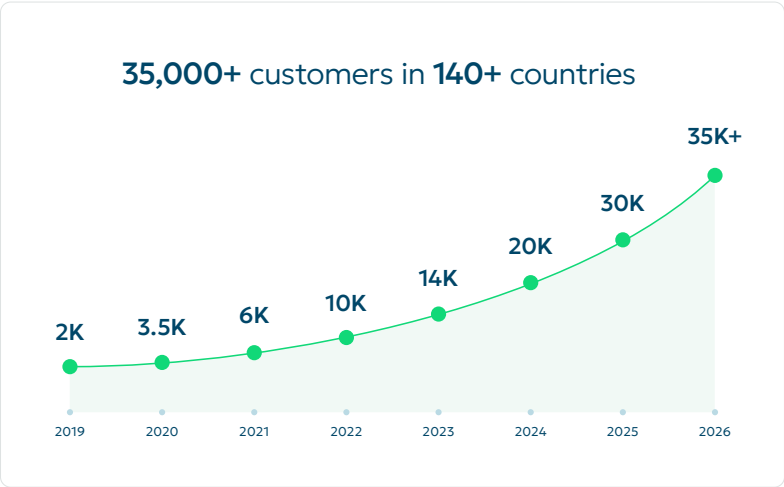

- > Reduced complexity through consolidation
- > Stronger security and policy consistency
- > Faster response and resolution with reduced operational overhead
- > Lower total cost of ownership
- > Increased reliability across hybrid and distributed environments

## The Gartner® Magic Quadrant™ for Endpoint Management

helps CIOs, security leaders, and IT operations teams validate a strategic investment in modern endpoint management and provides trusted third-party support during procurement.

Quadrant™ for  
Endpoint Management.

### Unify IT to simplify work.

The NinjaOne Unified IT Operations Platform delivers endpoint management, autonomous patching, backup, and remote access in a single console to cut spend, increase resilience, and improve efficiency. The platform eliminates IT complexity by bringing these capabilities together in an intuitive interface that teams can easily master. By automating routine work and reducing tool sprawl, organizations gain rapid time to value and deliver a better technology experience for employees. NinjaOne remains committed to customer success and has maintained a 98 percent satisfaction score for more than five years.
