

MANAGED SASE (PRISMA ACCESS)

Security

SERVICE OVERVIEW

Protecting users has become more complex since work-from-anywhere, cloud adoption and digital transformation have forced organizations to expand security beyond the traditional perimeter. Expanding traditional security controls by backhauling traffic to the corporate network for inspection is expensive to scale, impacting performance and introducing risk. That's why CDW is partnering with Palo Alto Networks to offer a new cloud-first solution that delivers reliable and scalable security to users regardless of where they choose to work.

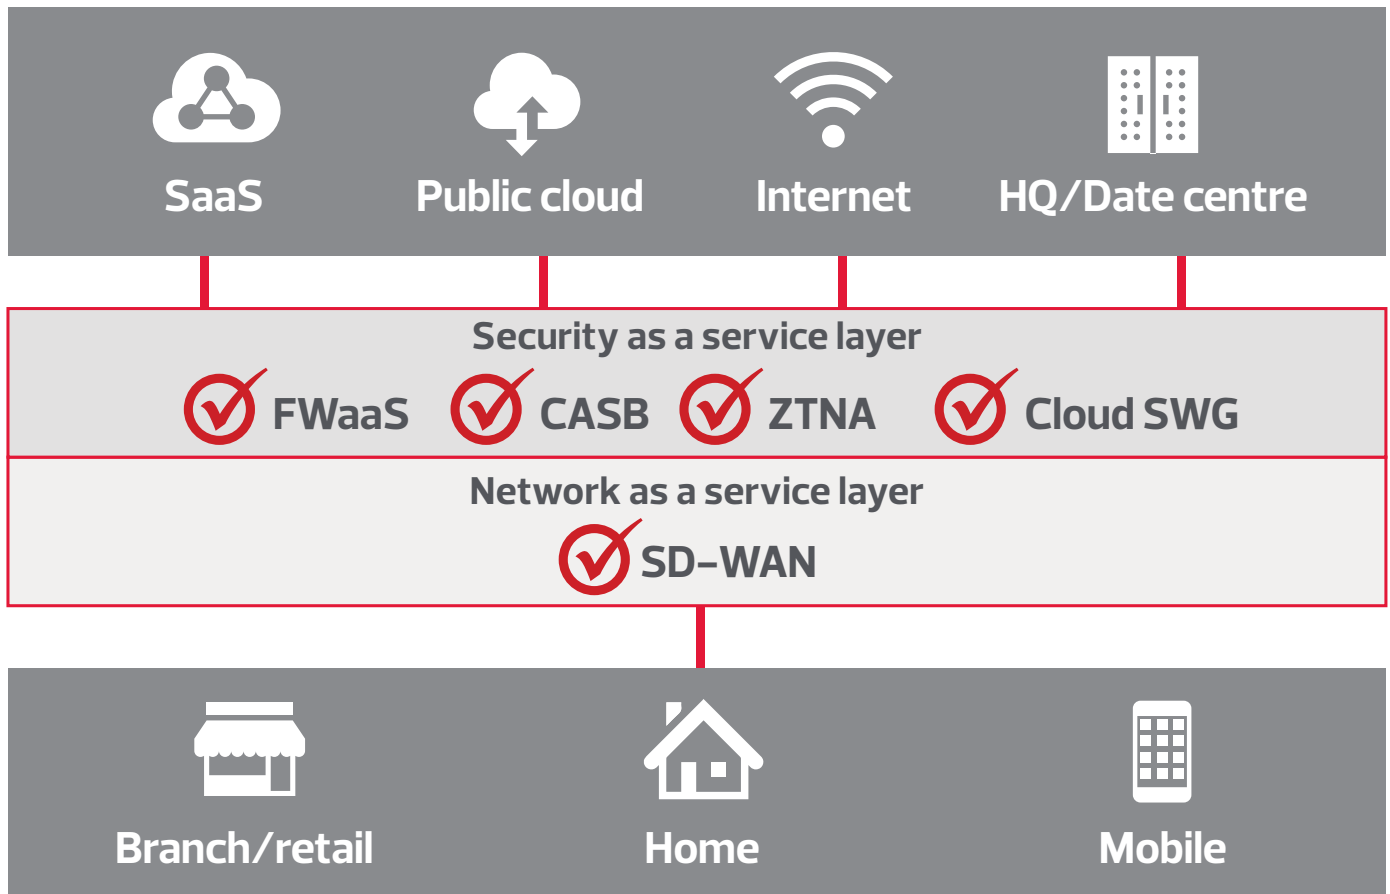

CDW's Managed SASE (Prisma Access) consolidates all the networking and security capabilities organizations need into one single cloud-delivered platform, providing security to any user, to all applications from anywhere. This solution consists of two layers: Security as a service (SaaS) and Networks as a service (NaaS).

The first layer (SaaS) offers comprehensive security capabilities consolidated into one single service edge, including:

- Firewall as a Service (FaaS): provides the full capabilities of Palo Alto Networks next-generation firewalls.
- Zero Trust Network Access (ZTNA): with granular role-based access control, users are authenticated and allowed to access sanctioned applications.
- Cloud Secure Web Gateway: protects remote users for all web traffic protocols and applications in hybrid environments.
- Cloud Access Security Broker (CASB): enables inline visibility and control of SaaS applications.

The second layer (NaaS) allows you to optimize your application traffic with Prisma SDWAN. Whether the traffic comes from remote networks or mobile users worldwide, Prisma Access inspects it and enforces security policies before routing it out to the internet, cloud applications, headquarters, or a private data centre.

FEATURES

- 24x7x365 management, monitoring and expert support by CDW's highly certified staff in our Security Operations Centre
- Security event response support
- Monthly native reports from the SASE platform and service-level reports
- A consistent client experience with low latency
- First-class security based on the Palo Alto Networks Firewall
- Ultra-low latency with reduced operational complexity that provides a reliable user experience

BENEFITS

- Maintain consistent security and compliance through First-class security for all users, applications and services and consistent policy across branch, mobile and retail
- Enables secure branch-to-branch, user-to-branch or branch-to-Internet connectivity without the need for direct connectivity
- Ensures enterprise security is extended to the remote and branch office locations, providing a seamless and scalable security solution wherever you need it
- Provides consistent risk management and compliance for all users access any cloud or SaaS-based applications

WHY CDW?

- Our industry-leading expertise and partnerships with leading technology providers can help address vulnerabilities in your network, now and in the future
- We have hundreds of years of IT security operations experience on our team
- We have major enterprise reference customers
- Our dedicated security operations facility is the most advanced in Canada
- We back up our security expertise with an array of industry and partner certifications
- Our service is SOC 1, SOC 2 compliant and our data centres are ISO 27001 certified
- We are committed to delivering an exceptional experience to our customers
