

You need more agility from your infrastructure

To keep pace with growing demands, you need solutions that offer speed, ease, and are backed by trusted expertise. That's why many are rethinking how they source and manage infrastructure — and turning to as-a-service models for answers.

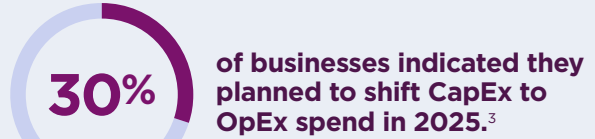

Your data isn't just growing, it's transforming how you work

AI and machine learning are unlocking powerful insights, but they also demand more from your infrastructure. Rapid data growth is fueling the need for faster, more flexible solutions.

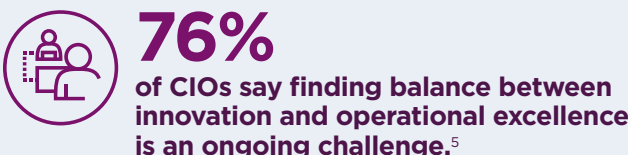

Budget pressures are rising

CIOs are grappling with unexpected cloud costs and shifting financial models. Many turned to cloud for the flexibility of OpEx — but costs are prompting a rethink. Controlling spend is more urgent than ever.

Talent is tight, and priorities are pulling

From closing skill gaps to driving innovation, IT leaders are being stretched in multiple directions. Balancing strategic goals with day-to-day operations isn't getting easier.

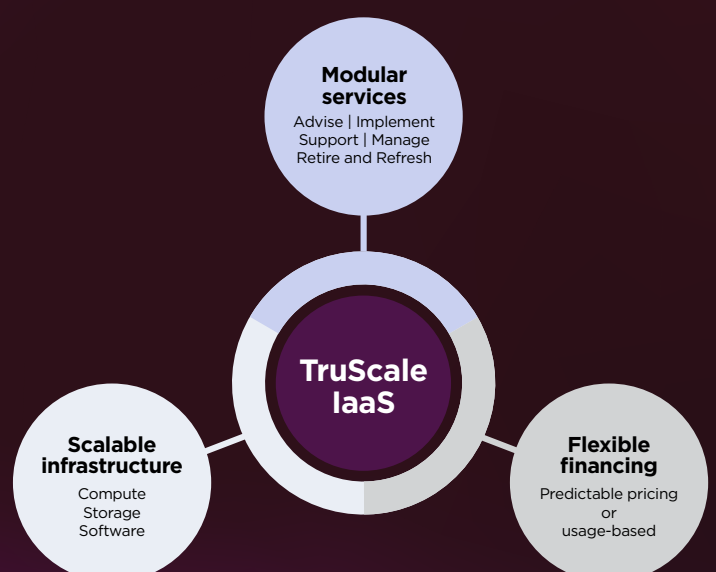

Compliance and control are coming back into focus

As regulations grow more complex and latency becomes a bigger concern, many organizations are rethinking public cloud reliance in favor of more secure, compliant, and controllable private cloud environments.

Choose your transformation path in 3 simple steps with Lenovo TruScale IaaS

- 1 Pick your infrastructure**
Scalable compute, storage, and software to match your workload needs
- 2 Select your services**
Modular options including advisory, deployment, management, and refresh
- 3 Choose your pricing model**
Predictable fixed or usage-based billing that aligns with your financial strategy

Power your digital transformation with Lenovo TruScale IaaS

An approach to infrastructure built around your needs, delivering:

Performance

that enables you to maximize value from your infrastructure investments and be ready for AI faster.

Agility

from a solution that can change with your business, with modular services and flexible financing models.

Expertise

from a trusted partner that can help you enhance security, sustainability, and control.
