APC™

Network closet solutions for the agile enterprise

Are you struggling to keep up with the increasing demand for reliable and secure network performance in a compact space? Discover how APC network closet solutions are crafted to overcome the complexities of modern tech environments.

APC solutions include racks, power, power distribution, physical security and cooling products to optimize your network closet. From small businesses to large enterprises, APC products and Schneider Electric software and services ensure the uninterrupted operation of network infrastructure.

APC network closets. The complete solution you need.

- High-strength, space-optimized racks with unobstructed airflow make installation easy and offer quick access to switches and servers with high-density cable management.

- All equipment is 100% compatible with multi-vendor networking and server equipment.

- Get the stand-alone security and environmental monitoring that integrates into your existing BMS/DCIM or remote network management systems.

Closet to cloud. Maintain and increase access to in-house and cloud applications.

With APC solutions, you can easily:

- Manage your environment remotely with access to data about security, power, heat and humidity

- Lower risk of data loss and maintain availability during power outages, cooling failures, security breaches and floods

- Protect access to your IT applications remotely or locally, in the office or in the cloud

Streamline your project with a Data Center Reference Design

Schneider Electric Data Center Reference Designs are validated and documented plans representing how physical infrastructure systems are configured and laid out as well as specifying the components used. Discover the best fit data center design for your facility to operate effectively and efficiently—a design that delivers for the needs of your unique parameters and requirements.
