IDENTITY SECURITY INSIGHTS

Identity Security Insights

Strengthen your identity security posture by uncovering & eliminating hidden paths to privilege with Identity Security Insights

Today's interconnected IT environments create a complex identity landscape, filled with ever-evolving human and non-human identities, privileges, devices, and systems—each a potential entry point for attackers. Disjointed, domain-specific identity security solutions create blind spots, hindering the ability to see the full picture and hidden paths to privileges that attackers can exploit.

BeyondTrust Identity Security Insights offers a continuous assessment and monitoring of risks across the identity landscape. Our data-driven approach leverages sophisticated AI and ML-powered analysis to uncover "true" account privileges, weak controls, and obscure privilege paths across endpoints, servers, identity providers, IaaS, PaaS, SaaS, and DevOps tools. It also offers prescriptive recommendations and detections with rich context to proactively address critical identity security issues. Insights' seamless integrations with existing security tools and incident response workflows enable teams to collaborate swiftly and respond to identity threats before they can be exploited.

"We hooked up Insights, got all of our connectors in and it was up and running in 30 minutes. Within two hours, we had recommendations and detections in our environment that were actionable, and not only that, we saw a significant reduction in false positives."

—SENIOR SECURITY ANALYST, ANNA ESSEX, POLSINELLI

Broad, Continuous Coverage Across All Environments
Gain a comprehensive view of your entire environment from an attacker's perspective. Proactively uncover and eliminate identity security vulnerabilities before they are exploited.

Hardened Identity Security Posture
Boost resilience and improve identity hygiene and security posture with proactive AI/ML powered detections and recommendations.

Effective Collaboration & Remediation
Rapidly remediate issues and share detections and recommendations across teams and tools via streamlined workflows and integrations

Feature Highlights

Centralized Dashboard

Gain a full understanding of your identity landscape, including human and non-human identities, accounts, entitlements, configurations, and cross-domain risks from a single place. Paths to privilege visualizations combined with rich reporting quickly identify and prioritize your greatest identity security threats.

Proactive detections and recommendations

Uncover identity hygiene issues and the abuse of privileges and identity infrastructure. Proactively address risks and improve security posture.

Rapidly expanding set of integrations

Leverage streamlined workflows across your IT, security, and IAM teams for rapid response and remediation. Pivot to integrated PAM controls to right-size entitlements, ensure least privilege, or block access.
