## Cisco wired and wireless make things better by making things easier

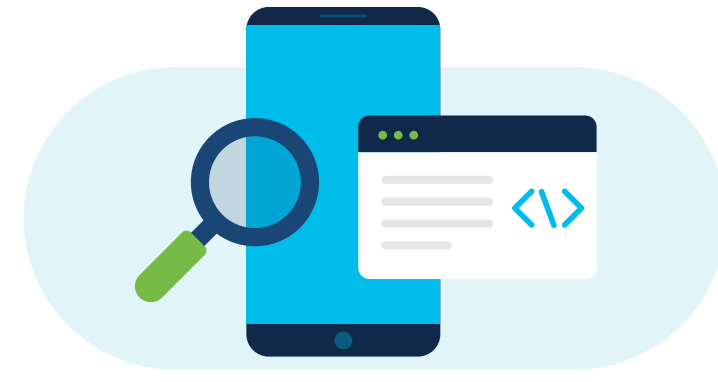

The Cisco Catalyst family of products gives you more, so you can do more.

### Reason 1

#### Cisco IOS® XE for both wired and wireless means less complexity

- With one common OS, the network is easier to troubleshoot and manage, letting your IT staff get more done in less time.
- An open platform, Cisco IOS XE allows for management options like Cisco DNA Center, CLI, WebGUI or third-party apps.

#### End-to-end security and trust are built into all devices

### Reason 2

- Hardware-enabled encryption keeps data secure.
- Software is designed for easy integration with ISE and Cisco Umbrella®.
- Supply chain security is delivered through trustworthy solutions.

### Reason 3

#### Optimized bandwidth for Wi-Fi 6

- Eliminate Ethernet bottlenecks with next-gen access points and multigigabit switches.

#### Deliver higher availability

### Reason 4

- Easily configure your wireless to minimize downtime.
- Gain visibility end to end with telemetry and open APIs.
- Built-in dual field-replaceable fans and power supply provide reliability and redundancy.

### Reason 5

#### Provide better experience

- Easily control application traffic with compatible Quality-of-Service (QoS) configurations.

CDW solutions architects conduct detailed assessment of your current network infrastructure and help you design the right solution for your workload, budget and business goals.
