

Modernize your compute infrastructure

Refresh to the newest technologies with the fastest performance while increasing your reliability and security.

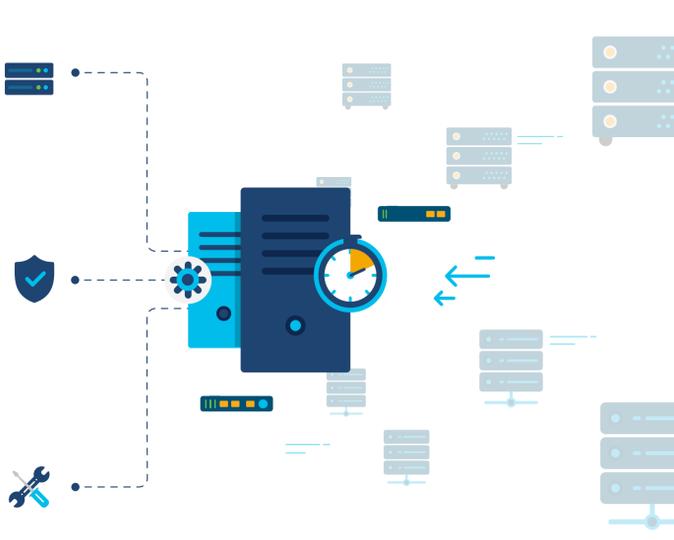

¹Based on performance data provided by Intel and AMD.

Refreshing makes things simpler – fewer devices to track, support, and maintain.

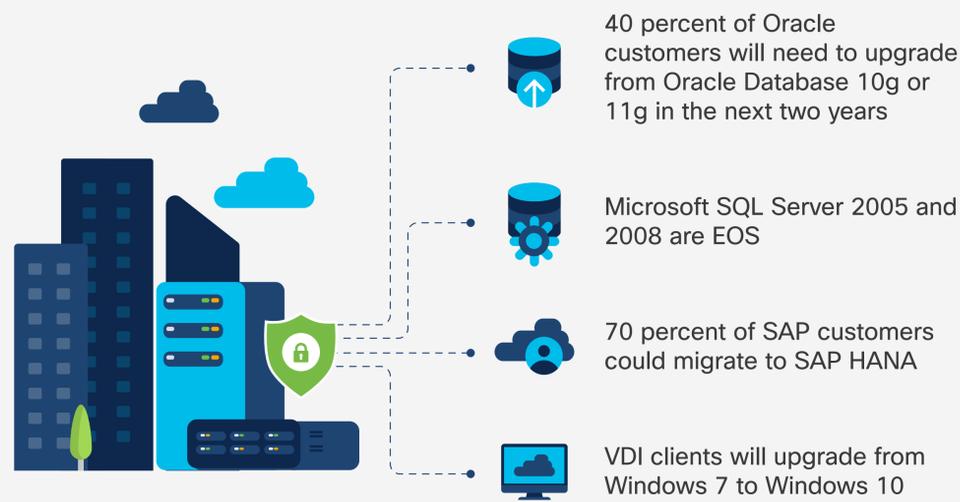

Cisco UCS® M5 servers offer consolidation ratios of up to 15:1 versus Cisco UCS M3 servers

Fewer servers will reduce your administrative overhead, OpEx, and security footprint

Utilize Cisco Intersight to increase IT productivity

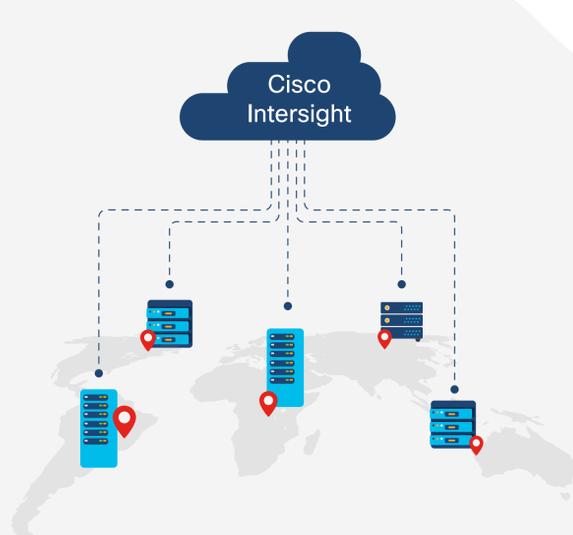

Workload modernization requires infrastructure upgrades.

Simplify and save.

High consolidation ratios mean less hardware and lower software licensing costs. Cisco Intersight Infrastructure Service reduces the complexity and manual effort required to deploy, upgrade, and maintain your servers and hyperconverged infrastructure, providing operational savings.

Cisco UCS and Cisco HyperFlex™ enable customers to securely follow their applications and data anywhere across the multicloud, edge, and core with unique innovations to their server architectures.

Increase end-user productivity: Whether it is running a report or a VDI session, faster response times make everyone more efficient.

Increase customer satisfaction: Give customers answers faster, whether on the web, on the phone, or in person.

Reduce the delivery costs of your services: Faster processors, more memory, server consolidation, and seamless management can save you both CapEx and OpEx.
