

Streamline security policy management with Cisco ISE services.

Professional Services for Cisco Identity Services Engine (ISE)

The linchpin of a healthy Zero Trust architecture is consistent, compliant and comprehensive policy management. While critical to the success of Zero Trust, policy management is one of the biggest pain points for organizations implementing a zero trust architecture. The constant evolution of threats and the need for granular access controls require continuous updates and adjustments to security policies. Furthermore, maintaining consistency across diverse environments and ensuring that policies are uniformly enforced can be challenging, particularly in large and complex infrastructures. Cisco Identity Services Engine (ISE) is the only complete Network Access Control (NAC) solution in the marketplace and is the centerpiece for Zero Trust access in the workplace.

Professional Services for Cisco ISE can help you achieve:

Operational Efficiencies

Increased Performance

Reduced Risk

Finding the Right Solution

CDW's Network Security experts can help customers gain agility with zero trust provisioning and flexibility in automating their environment through the entire lifecycle of managing Cisco ISE. With CDW's help, you can bolster the security of your network with your Cisco ISE solution by ensuring all users comply with your defined security policies.

- **Plan and design:** CDW can assess the security posture of your current network environment and develop a strategy for implementing a Cisco ISE solution.
- **Implementation:** CDW can deliver seamless ISE installation services for both wired and wireless environments as well as advanced environments. Our experts can also provide assistance with device configuration and provisioning.
- **Set-up services:** CDW can provide specialized ISE set-up services for different network environments, including:
 - **Wired:** Expert-led services for internet-based networks.
 - **Wireless:** Expert-led services for guest and secure wireless access.
 - **Advanced:** Includes third-party integrations.
 - **SD-access:** Expert-led services for SD-Access
- **Managed services:** CDW can monitor and manage your Cisco ISE nodes for a predictable monthly fee, taking that burden off your IT staff.

CDW + CISCO

No other Cisco Gold Partner in the world offers CDW's combination of expertise and experience. We are a one-stop shop for Cisco solutions, having attained the broadest range of proficiencies across multiple technologies.

Services Overview

The following capabilities are available in a Professional Services for Cisco ISE engagement:

Capability	Available
Highly secure business and context-based access: Cisco ISE works with network devices to create an all-encompassing contextual identity with attributes such as user, time, device, device posture, location, threat, vulnerability and access type.	✓
Streamlined network visibility through a simple interface: Cisco ISE stores a detailed attribute history of all the endpoints that connect to the network as well as users on the network, all the way down to endpoint application details and firewall status.	✓
Network segmentation: With Cisco ISE building security directly into the network, it dramatically reduces the attack surface, the scope of compliance and limits the lateral movement of malware to contain threats.	✓
Extensive and flexible policy enforcement: Cisco ISE defines easy, flexible access rules that meet ever-changing business requirements — all controlled from a central location that distributes enforcement across the entire network.	✓
Robust guest experiences: Cisco ISE provides you with the ability to highly customize various guest portals through an on-box or cloud-delivered portal editor that provides dynamic visual tools.	✓
Security ecosystem integrations: Cisco ISE offers 100-plus integrations with Cisco and non-Cisco ecosystem products to enable security products to share data and work together to find threats faster.	✓
Self-service device onboarding: Users can manage devices according to the policies defined by IT administrators. The IT staff will have the automated device provisioning, profiling and posturing needed to comply with security policies.	✓
