

We understand the journey to zero trust.

Zero Trust Solutions

60 percent of organizations plan to implement Zero Trust over the next two years, according to a recent report from the Cloud Security Alliance. This surge of adoption is being driven, in part, by a fundamental recalibration of Zero Trust from a hypothetical model to a realistic strategy for cybersecurity maturity. Fortunately, for organizations pursuing Zero Trust, there are more tools and frameworks than ever before. CDW has a broad range of services and solutions — from executive-level strategy assessments to granular domain optimization services — to help organizations rapidly and sustainably mature their Zero Trust programs.

A Zero Trust Solution can help you achieve:

Agility

Faster Innovation

Reduced Risk

Finding the Right Solution

An effectively executed Zero Trust strategy can propel your organization forward, improving your speed of innovation, decreasing your attack surface and streamlining compliance and governance efforts. It can also better position an organization to acquire cyber insurance and drive compliance with new and emerging regulatory frameworks.

CDW has two strategic assessments that have helped many customers on their journey toward Zero Trust maturity. Both services are aligned with and pull from the latest models published by NIST and the Cybersecurity and Infrastructure Security Agency (CISA).

- **Rapid Zero Trust Maturity Assessment:** This lightweight, quick-start assessment is designed to support executives as they understand their current Zero Trust maturity against the CISA model and prioritize near-term, high-impact projects. It is led and delivered by CDW's senior security experts.
- **Zero Trust Strategy and Blueprint for Execution:** This deep-dive assessment provides a comprehensive view of a security program and desired end state. It produces several detailed deliverables designed to guide a long-term, multi-year Zero Trust strategy, with recommendations on technology, process, staffing and governance.

With the strategy set, CDW's deep Security portfolio can be used to advance an organization's Zero Trust maturity in individual domains. Identity and Access Management, for example, is a critical pillar of Zero Trust, and we regularly assist customers in deploying modern IAM toolsets in conjunction with their Zero Trust strategies. In addition, CDW offerings around data governance, application security and threat management (EDR/MDR, SIEM, etc.) are critical for supporting Zero Trust.

CDW + ZERO TRUST

Our Zero Trust services and solutions help organizations achieve their targeted business outcomes, including:

- **Compliance:** New Cybersecurity Risk Management guidance from the SEC — as well as other long-standing data security regulations — requires board-level visibility and accountability over cyber risk. A Zero Trust strategy can get you there.
- **Risk Reduction:** A Zero Trust approach, even at early maturity stages, can have a meaningful and measurable reduction to your exposed attack surface.
- **Agility:** With a Zero Trust strategy in place, organizations can move faster and deploy quicker, moving the business forward with less friction from security and governance.
- **Improved UX:** Zero Trust, when implemented correctly, creates a behind-the-scenes security layer that allows users, both customers and employees, to navigate corporate environments seamlessly and securely.
- **Innovation:** An agreed-upon security philosophy, like Zero Trust, allows for internal alignment, faster innovation and better security-to-business communication.

CDW's full lifecycle of Services can support your organization no matter where you are on your journey

CDW is your Partner for Zero Trust

Regardless of your current maturity and toolset, CDW has services designed to support every stage of your Zero Trust journey. CDW's Zero Trust services and solutions align with leading frameworks, including those published by CISA and NIST, and offer your organization tactical and actionable approaches to mature your capabilities in the five key pillars of a Zero Trust program: identity, device, network and environment, application workload, and data.

Our most popular Zero Trust offerings include:

Services	Available
Assess and Measure	
Rapid Zero Trust Maturity Assessment <ul style="list-style-type: none">A quick-start assessment designed to baseline an organization against an established Zero Trust model and provide recommendations on priority projects.	✓
Zero Trust Strategy and Blueprint for Execution <ul style="list-style-type: none">A deep-dive, multi-layer assessment designed to output a comprehensive strategic roadmap to Zero Trust maturity.	✓
Rapid IAM Strategy Assessment <ul style="list-style-type: none">An objective assessment of your current IAM program and its ability to protect your organization from a wide range of threats.	✓
Cloud Security Assessment <ul style="list-style-type: none">A complete view into your cloud security posture across multi-cloud environments, with a detailed mapping of strengths and opportunities for improvement.	✓
Design and Deploy	
vCISO Workshops and Consulting <ul style="list-style-type: none">Executive-led workshops, consulting and vCISO services designed to drive consensus around Zero Trust, instigate cultural change and build business justifications.	✓
Technology Deployment and Integration <ul style="list-style-type: none">Systems deployment and integration services for most leading Zero Trust technologies, including from leading IAM, networking and endpoint security vendors.	✓
Policy and Procedure Development <ul style="list-style-type: none">P&P development services to reorient corporate policies to new Zero Trust norms and goals.	✓
Manage	
Managed Identity Services <ul style="list-style-type: none">Leverage 24x7 managed IAM and PAM services to support your Zero Trust strategy without having to hire hard-to-find IAM experts.	✓
Managed Security Services <ul style="list-style-type: none">Complete managed security services, including managed IPS/IDS, managed SIEM, managed EDR/MDR, and vulnerability and patch management.	✓
