Leave Ransomware Concerns Behind

SaaS data protection with enterprise-grade security.

No one is immune from ransomware, but everyone must protect against it.

Ransomware attacks will occur every 11 seconds this year1.

The average ransomware attack costs $4.44m2.

The average ransomware incident takes 287 days to recover3.

Cybercriminals view organizations in a state of change or with limited IT resources as easier targets.

Ransomware attacks against the retail industry jumped 50% in the first quarter of 20204.

The number of publicly recorded ransomware attacks against manufacturing companies tripled in 2020 alone5.

Partnership with Metallic for data recovery and business continuity:

Metallic BaaS protects all your data from malicious threats. With Metallic you can:

• Adopt an edge-to-cloud security strategy across your data estate
• Mitigate risk of exposure and eliminate costly downtime
• Adopt a proactive recovery plan
• Stay future-ready against new and emerging cyber threats

Protect your most valuable assets and ensure business continuity with Metallic SaaS Backup.
