Build Your Agency’s Next Breakthrough

Accelerate innovation with help from Dell Technologies.

Of the $100 billion the federal government spends on IT, 80% goes toward maintaining existing investments, including legacy systems. That leaves little for innovation and new development, both of which are vital to modernization efforts.¹

Dell Technologies is a trusted partner to our nation’s government agencies and the U.S. Department of Defense. We bring together the expertise and end-to-end intelligent solutions to help you simply, securely and responsibly innovate and collaborate to deliver data-driven breakthrough experiences for your customers and your workforce, no matter where the mission takes them.

Discover your next big breakthrough with a broad range of solutions and services from Dell Technologies that simplify multi-cloud experiences, enable the future of work, and allow you to innovate with data anywhere.

1. **Increase your agency’s agility with multi-cloud on your terms.**

   Federal agencies are moving quickly toward multi-cloud environments to store and run data and applications anywhere, from the office to the front lines. Harness a simple cloud experience that runs efficiently, scales and keeps pace with federal demands. Take advantage of dynamic as-a-Service experiences to align the technology to the mission.

2. **Embrace the future of work — driving experiences that are smarter, faster and more secure.**

   The hybrid workforce is here, and it’s critical they be able to access the data they need securely. Enable your teams with intelligent devices at the edge and collaborative user experiences, and ensure continuity of operations with a modern IT environment.

3. **Innovate with data anywhere.**

   Turn mountains of data into mountains of intelligence by moving compute functions to the edge. Increasingly complex technological systems are required to digest and analyze massive amounts of data on-premises and at the edge. Dell Technologies can help federal customers innovate with data anywhere it exists.

Fortify your agency with modern security.

Distributed data, hybrid work models, multi-cloud environments and as-a-Service sourcing are changing almost everything we know about cybersecurity. Fortify security with a layered approach that meets zero-trust mandates, protects data and systems and reduces the impact of cyberattacks. Dell Technologies solutions enhance cyber resiliency and scale in the face of increasing security complexity.

Arm your department with added protection.

- Dell trusted devices
- Dell PowerProtect offerings
- Dell Supply Chain Security
- Dell Incident Response and Recovery
- Dell automated security apps
