Forcepoint Security Solutions

DATA-FIRST SASE

DATA SECURITY

Forcepoint ONE Data Security
Enterprise-class DLP, unified across all key channels, managed simply, from the cloud

Features
- Industry-leading DLP delivered as a cloud-native SaaS solution
- Set up policies with just a few clicks with over 1700 ready-to-use policies, templates, and classifiers
- Data protection and enforce company policies regardless of network connectivity
- Integrates with Forcepoint ONE Risk-Adaptive Protection for automated policy enforcement based on risky behavior
- Includes device control to manage removable devices at the endpoint.

Benefits
- See all incidents and alerts within seconds from efficient, organized dashboards
- Reduce costs by eliminating on-prem expenses, equipment, management, and maintenance
- Deploys policies in seconds instead of hours.
- Manage DLP across cloud apps, web, email and endpoints from a single DLP interface

Forcepoint DSPM powered by Getvisibility
See. Secure. Simplify. Your complete data landscape

Features
- AI-powered accuracy, delivering visibility and control over your data landscape, while automating discovery and classification processes.
- Feature rich dashboard for a 360 degree view of your data
- Automated remediation and reporting streamlines processes and reduces risks

Benefits
- Automatically classifies data from cloud and network sources using advanced AI-powered scanning, continually improving accuracy with machine learning.
- Enforce least privilege access by automating repair of data permissions, quarantining, and moving files to correct locations.
- Easily define ownership and accountability for different data sets
- Fast and easy deployment with quick time to value

### Forcepoint Risk-Adaptive Protection
Data protection that adjusts based on real-time user risk

Features
- Real-time risk calculation for every user
- 130+ Indicators of Behavior (IOBs) for complete incident analysis
- Automated policy enforcement based on real-time user risk profile

Benefits
- Complete data protection—audit, coach, encrypt, and block
- Fewer resources needed to run your data protection program
- Dramatically reduced false positives and shorten investigation time

Indicators of Behavior (IOB)

ALERTS SENT TO CLOUD FOR INVESTIGATION

USER
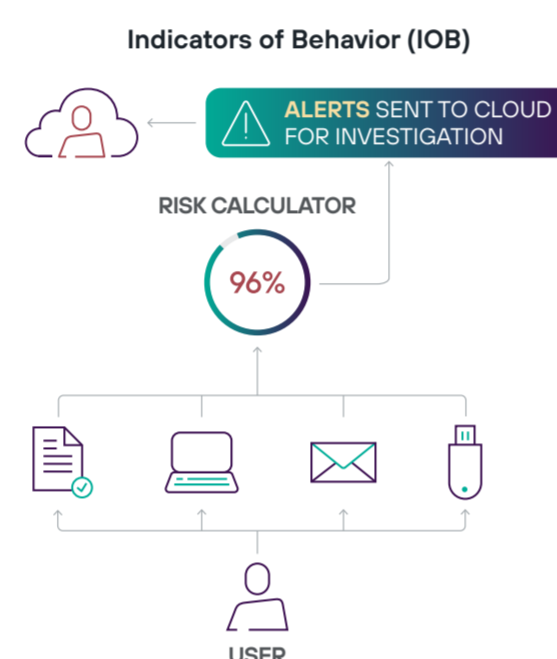

Forcepoint Data Classification powered by Getvisibility
Leverage AI to deliver highly accurate data classification for Forcepoint Enterprise DLP and Forcepoint ONE Data Security

CLASSIFY | A.I. | CONTINUOUS LEARNING | AUTOMATION | ACCELERATE COMPLIANCE

Features
- Uses AI to identify data types for classification with superior accuracy
- Continuously learns and improves with usage
- Learns based on your unique organizational classification requirements

Benefits
- On-the-fly classification of newly created data everywhere your people work
- Improve DLP functionality with ever- increasing classification accuracy
- Add visual labels and metadata to facilitate policy enforcement and regulatory compliance

### Forcepoint DLP for Cloud Email
Prevent the #1 form of data theft: unauthorized email content

Features
- Extend your DLP coverage with granular email controls
- Mail agnostic supporting any email client (agentless)
- Manager approval workflows with incidents managed in the same console as other channels

Benefits
- Control what can be emailed out of your organization at scale
- Industry-leading DLP with largest classifier library identifies and stop high-risk behavior
- Deploys in minutes with easy integration into existing email flow

### Forcepoint Enterprise Data Loss Prevention
Visibility and control everywhere your people work and anywhere your data resides

Features
- Unified policy across channels: endpoint, network, cloud, web, private applications, and email
- Over 1700 out-of-the-box classifiers, policies, and templates simplifying initial deployment and ongoing DLP management
- Support for structured and unstructured intellectual property (IP) data

Benefits
- Implement consistent data loss detection configuring all channels from a single policy
- Remove analyst blind spots to data usage with visibility to data everywhere
- Quickly and easily achieve data security compliance across all channels

SECURE ACCESS SERVICE EDGE
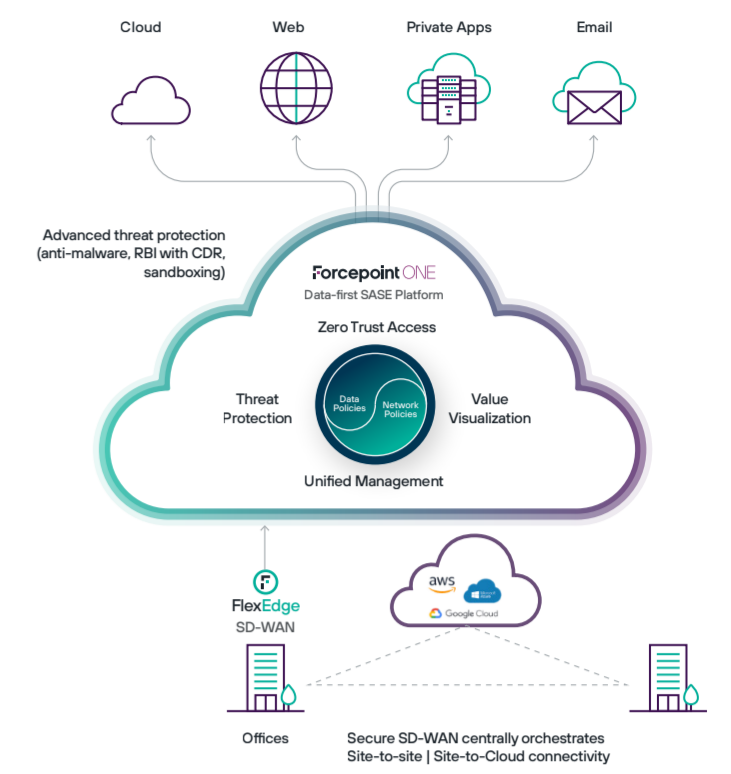

Forcepoint ONE
Securely connect users to business applications and the web, seamlessly

Features
- Single console policy management for CASB, ZTNA, SWG and RBI
- Unmanaged device support with patented reverse proxy
- Auto-scaling public cloud architecture with 99.99% verified service uptime
- See the economic value and impact on your security posture and risk exposure with visual, interactive dashboards

Benefits
- Zero Trust security at scale
- Reduce risk and prevent data loss across use of the web, cloud and private apps
- Part of a modern, single-vendor SASE architecture
- Visualize the outcome of your cloud security investment

Cloud | Web | Private Apps | Email

Cloud Access Security Broker (CASB)
Enforce access control and data security for cloud applications

Features
- Single console policy management for CASB, ZTNA, SWG and RBI
- Unmanaged device support with patented reverse proxy
- Global, elastic scalability with a verified 99.99%+ uptime

Benefits
- Extend traditional endpoint DLP to the cloud
- Manage the broadest range of devices including BYOD, Chromebook, Linux endpoints, and more
- Maintain global compliance across all key regional regulations
- Auto-scaling on AWS to scan large volumes of data at rest in hours instead of days

Zero Trust Network Access (ZTNA)
Enforce access control and data security for private applications

Features
- Secure access to private web apps, SSH, RDP, and more
- Unmanaged and managed device coverage
- Inline DLP and malware scanning

Benefits
- Ditch the VPN for remote users
- Apply Zero Trust access controls to private apps
- Prevent misuse or loss of data from private apps

### Forcepoint FlexEdge Secure SD-WAN
Easily connect and protect branch offices everywhere

Features
- Seamlessly mixes broadband with MPLS and protects with anti-intrusion security
- Combines hardware, software, warranty into packages for small, medium, large sites
- Part of single-vendor SASE architecture

Benefits
- Connect sites to the cloud efficiently and safely to better support hybrid workforce
- Modernize distributed networks without having to piece together different technologies
- Protect all users and devices at sites as they use the web, cloud, private apps

Integrated Cloud Services

FlexEdge Secure SD-WAN
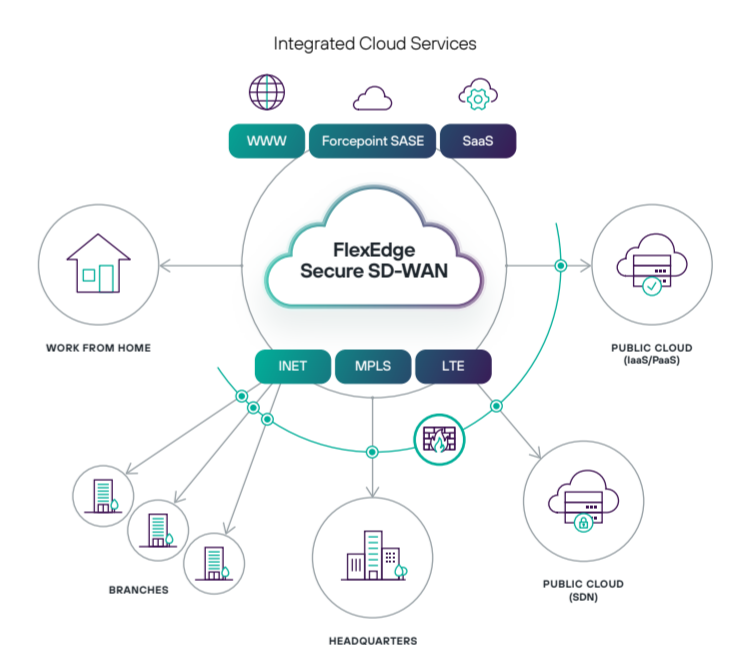

Secure Web Gateway (SWG)
Securely connect users to business applications and the web, seamlessly

Features
- Enforce on endpoint (up to 2X faster) or at network edge
- Shadow IT visibility and inline control
- Inline DLP and malware scanning

Benefits
- Secure the web without sacrificing performance
- Safeguard managed and agentless devices (Wi-Fi, BYOD, IoT)
- Inspect data uploaded from server apps to web storage
- Prevent misuse or loss of data on the web by removing blind spots and close security gaps

Remote Browser Isolation (RBI)
Isolate the web session from the user's device for Zero Trust web browsing

Features
- Zero Trust web browsing isolates all web code from the device
- Smart Isolation automates policy management elements, and is easy to adjust
- Content Disarm and Reconstruction (CDR) to sanitize documents at download and upload

Benefits
- Safe interaction with unsafe sites and seamless user experience
- Elevated C-suite protection without blocking sites
- Clean file downloads, even from known malicious sites

Forcepoint Next-Generation Firewall (NGFW)
Fast, resilient security for edge and cloud that scales easily

Features
- Fast anti-intrusion security for network edge and cloud
- Zero-touch deployment and updates of 1000s of sites from single console
- Built-in high-availability SD-WAN and ZTNA App Connector

Benefits
- Safeguard site-to-site and site-to-cloud communications
- Simplify operations with centralized visibility and control
- Easy integration with SASE/SSE platforms

Built-in advanced intrusion prevention
