Architectural Review for Google Cloud

Optimizing your Google Cloud environment for security, accountability, and effectiveness

The customer's challenge

Organizations today are rapidly adopting Google Cloud to drive innovation and digital transformation. However, many struggle to implement proper security controls, optimize their cloud architecture, and follow best practices in their Google Cloud environments. This leads to potential security vulnerabilities, inefficient resource utilization, and increased operational costs.

As cloud environments grow in complexity, maintaining visibility across projects, billing accounts, and resource structures becomes increasingly difficult. Without a comprehensive review of your Google Cloud environment, you risk operating with suboptimal configurations that could impact your security posture, operational efficiency, and ability to scale effectively.

CDW's solution

- ✓ **Comprehensive Google Cloud assessment**
- ✓ **Expert-Led working sessions**
- ✓ **Actionable recommendations**

CDW's Architectural Review for Google Cloud provides a comprehensive assessment of your Google Cloud environment, focusing on security, accountability, and effectiveness. Through a series of interactive working sessions, our experienced architects evaluate your current setup across multiple domains including solution architecture, billing accounts, identity management, security controls, networking, monitoring, and service configurations.

This service is delivered in partnership with Google Cloud, ensuring you receive recommendations aligned with the latest best practices. The engagement includes a detailed assessment of your current state, a proposed design for future deployment, and a prioritized action item list. Our approach emphasizes customer education and understanding, ensuring your team gains valuable insights throughout the process.

Next steps for your findings

Recommendations

Remediation plan

Implement the prioritized remediation plan outlined in our assessment to address critical security and configuration gaps

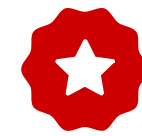

Follow-up

Schedule follow-up sessions with CDW experts to address any questions and plan for implementation support

Additional services

Consider additional CDW services for implementation assistance if you need help executing the recommendations

Continue best practices

Establish regular health check reviews to ensure your environment continues to follow best practices as your cloud usage evolves

Why CDW for Google Cloud Architectural Review?

Expertise that drives outcomes

With over 1,600 experienced architects, engineers, and project managers, CDW delivers real business solutions through cloud and cloud-native technologies.

Comprehensive assessment approach

Our service covers all critical aspects of your Google Cloud environment, from billing and identity management to networking and service-specific configurations.

Google Cloud partnership

As a trusted Google Cloud partner, CDW provides recommendations based on real-world experience and Google's latest best practices.

Education-focused delivery

We prioritize knowledge transfer throughout the engagement, ensuring your team understands the recommendations and can maintain best practices going forward.
