

## Work Safer

An all-in-one solution from Google with strong protections against phishing, malware, ransomware, and other cyberattacks

The way we work has fundamentally changed. Employees are creating more sensitive data and information than ever before and they're regularly collaborating with colleagues and partners dispersed across the globe. Legacy collaboration tools weren't designed for this modern way of working and are exposing your organization to unnecessary security risks.

94%<sup>1</sup>

of malware was installed via malicious emails & attachments

80%<sup>2</sup>

of hacking breaches involve brute force or the use of lost or stolen credentials

45%<sup>3</sup>

of malware is delivered by email containing common Microsoft Office documents

Google **keeps businesses of every size safer** with a zero trust security model that was built for modern collaboration

### Cloud-First

A browser-based approach that is architecturally superior and constantly updated

### Detect Everything

Operating on a global scale to protect your organization's information

### Trust Nothing

Built in controls, encryption, and verification with a Zero Trust approach

### Protect Everyone

Making everyone safer with secure endpoints and strong account takeover protections
