The State of Print Security 2019

Quocirca's Global Print Security Landscape Report 2019 reveals that SMBs and enterprises continue to be concerned about print security.

Organizations are continuing to suffer print-related data loss incidents, and most are still not confident their print environment is fully protected. These factors point to a critical need to educate C-level executives on the strategic value of effective print security as part of a broader information security strategy.

Organizations are concerned about their print security
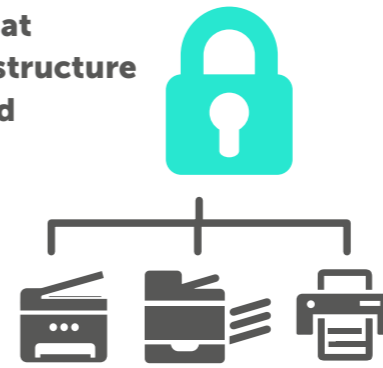

72% are concerned about print-related security breaches

24% are confident that their print infrastructure is fully protected

77% are increasing spend on print security

The print security gap must be closed

59% have suffered at least one print-related data loss

32% of print security incidents are caused by internal users

$394k the average cost of a print-related data loss

A Managed Print Service (MPS) is an enabler for effective print security

76% of organizations using an MPS are considered print security leaders*

39% of organizations have carried out print security assessments

40% are using pull printing to mitigate risk
