

Continuous Compliance

Stay compliant, every day, everywhere.
No more blind spots or surprises.

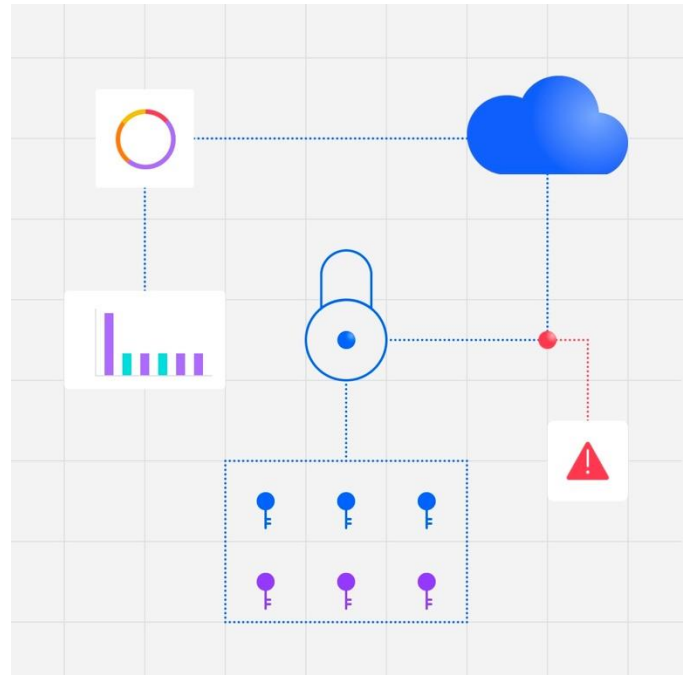

Compliance is no longer a periodic event; it's a continuous expectation. Today's enterprises are under constant pressure to prove trustworthiness every day, not just once a year. Disconnected systems, siloed processes, and shifting regulations make this increasingly difficult. IBM Guardium Data Protection automates oversight, closes visibility gaps, and validates controls in real time across hybrid cloud and SaaS environments.

Guardium transforms compliance from an annual struggle into a constant state of readiness with:

Compliance Controls — Map internal standards and regulations directly to Guardium controls. Replace spreadsheets with living mappings, templates, and evidence to keep requirements enforced, owned, current, and audit-ready.

Compliance Thresholds — Define flexible KPIs and targets from Guardium data. Track aging tasks, SLA adherence, and trends to spotlight slipping performance, drive improvements, and demonstrate compliance.

Compliance Hub — The Hub unifies control health, thresholds, and signals in a dashboard. See what's on track, pinpoint gaps, drill into owners and workflows, and prioritize fixes.

As regulations like GDPR, DORA, and industry standards like NIST evolve, and new AI-related risks emerge, compliance becomes more dynamic and costly. Siloed tools struggle to keep pace. IBM Guardium Data Protection simplifies oversight, reduces compliance failures, and lowers the overall costs associated with non-compliance and breach response.

Proving compliance is a vital mission. IBM Guardium Data Protection transforms compliance from a checklist into a competitive edge, enabling teams to stay ahead of threats, audits, and expectations.
