

IBM FlashSystem: Your mission critical lifeline

Cyberattacks – Come Out Fighting

Cybercrime is a major concern for businesses of all sizes. With the average cost of an attack reaching \$4.24 million and potentially weeks to rectify, isn't it time you invested in updated storage technology that can help you recover your data quickly and keep your operations going on?

IBM Safeguarded Copy

Isolated and immutable snapshots of data, all stored on the same FlashSystem as your operational data. Designed to be faster than restoring from backup copies, implemented to **safeguard your business from cyberattacks**.

IBM FlashSystem Cyber Vault

The perfect partner to Safeguarded Copy. Scanning all snapshots of data, FlashSystem Cyber Vault is **quick to identify ransomware attacks** and data copies that have yet to be affected. Arming you with all the information to recover clean copies of your data.

Rapid Dependable Recovery

Protect your reputation and brand value with IBM. With all the technology necessary to detect cyberattacks early, **minimizing damage, reducing recovery time from days to just hours, and enabling forensic analysis** to help prevent another strike.

Identify. Protect. Detect. Respond. Recover.
Show cyberattacks what you're made of.
