

Mac, iPad, iPhone and Apple TV Management Solutions

For businesses of any scale.

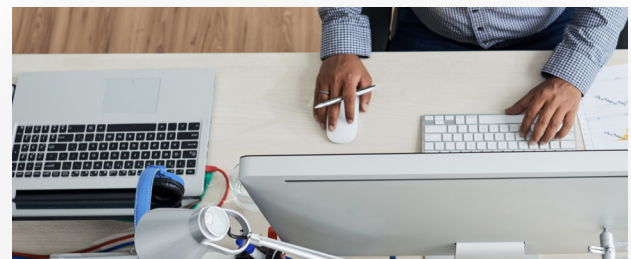

The Apple Management Experts

Since 2002, Jamf has been helping organizations around the globe succeed with Apple.

Whether you've been using Apple for years and have thousands of devices, or are just beginning to adopt Apple devices, we offer two solutions that are tailor-made for your business environment.

Jamf Pro is the standard for I.T. admins managing Apple in the enterprise.

Jamf Now is a simple, intuitive way for anyone to set up, manage and secure Apple devices.

Why choose Jamf?

No platform offers better security or delivers a better user experience than Apple.
And no solutions manage Apple devices better than Jamf Now and Jamf Pro.

ZERO-TOUCH DEPLOYMENT

While it only takes minutes to get started with an Apple device, repeating setup and configuration of devices can be time-consuming. Count on Jamf Now or Jamf Pro and Apple Business Manager to automatically enroll and configure new devices.

INVENTORY

Automatically collect hardware, software and security configuration details from your Apple devices, such as who the device is assigned to, operating system, serial number, applied settings and deployed apps.

DEVICE MANAGEMENT

Easily configure device settings, distribute apps to specific users, and even kick off operating system upgrades to keep devices current and secure.

SECURITY

Leverage native Apple security tools like FileVault and Gatekeeper at scale. Take it to another level with targeted restrictions, configurations, and remote device wipes. Jamf Pro and Jamf Now are also SOC 2 compliant.

Need advanced management?

Supercharge your management with Jamf Pro.

SELF SERVICE

Delight your end users with curated apps, documents and company resources at their finger tips in a branded portal.

300+ INTEGRATIONS

Deep integrations with Microsoft, Google, and other leading vendors help you embrace single sign-on, extend your directory and more.

BINARY MAC AGENT

Execute system-level tasks like scripting and package deployment with Jamf Agent for Mac.

Key Features

Enterprise-grade management for I.T professionals.

- ✓ Flexible roll-outs with User Enrollment (BYOD) or zero-touch deployment.
- ✓ Patented Smart Groups help intelligently manage devices without I.T. interaction.
- ✓ Advanced inventory data enables you to automatically trigger device management tasks.
- ✓ Binary macOS agent for system-level task execution.
- ✓ Integrate with Jamf Connect for access control and Jamf Protect for security.
- ✓ Self Service, a Mac app that delivers a curated portal of apps, docs and more.
- ✓ First-party apps for shared use cases (Jamf Setup, Jamf Reset) and package creation (Composer).

Streamlined device management capabilities that anyone can use.

- ✓ User-initiated or zero-touch deployment
- ✓ Easily customize and deploy apps and settings for groups of devices, all from one place with Blueprints
- ✓ Ability to deploy custom profiles, macOS packages and custom apps with the Jamf Now Plus Plan for even great flexibility
- ✓ Keep devices secure with encryption, passcode enforcement, and remotely locking or wiping a device
- ✓ Choose which iPad and iPhone apps are available on devices by allowing all apps, hiding some apps, or only allowing some apps
- ✓ Immediately sign up and manage devices, no training or documentation required.
