

OEM Memory

vs

Kingston Technology Memory

For quality, reliability, price and performance, here's why Kingston is the smarter choice.

Using Kingston memory may not void the manufacturer's warranty.

Kingston has heard of instances where a computer manufacturer's sales representative has told customers if they use third-party memory in the manufacturer's computer system, the warranty is voided. This may not be true—they may be attempting to coerce customers into purchasing memory modules from the system manufacturer, usually at much higher prices than Kingston's. Please ask customers to confirm such a requirement is in the manufacturer agreement. Even so, such a requirement may be illegal if it unreasonably restrains trade or lessens market competition. Customers should consult their attorney on this.

Kingston makes it easy to select compatible RAM memory.

Whether you're looking for memory for a desktop PC, laptop or server, simply **search by OEM brand system, memory part number or specifications.**

Kingston tests every module using popular applications, operating systems and the original equipment manufacturer's diagnostic program.

Kingston provides high-quality memory at competitive prices.

Kingston memory has been rigorously tested and carries a **lifetime warranty, backed by over 30 years** of design and manufacturing expertise.

We manufacture **system-specific memory** and, as a member of the industry-standards council, JEDEC, and an Intel Partner, we ensure that our server memory **fully supports all reliability and data integrity features provided by Intel chipsets.**

Throughout the sales cycle, Kingston makes sure you have the resources and support you need to keep your customers happy—and your business moving forward.

Kingston is everywhere.
