

Modernize your network with less operational burden

Meter delivers fully managed wired, wireless, and indoor cellular networking as a subscription—designing, co-managing, and operating your network.

E-Rate discounts available

- 95% eligibility
- Category 2 - Managed Internal Broadband Services (MIBS)
- Recurring service funded annually

Meter Hardware

Built in-house for security, reliability, and visibility—with buybacks and hardware refreshes included.

<p>Meter Wireless</p>	<p>Meter Switches</p>
<p>Meter Firewalls</p>	<p>Meter PDUs</p>

Meter Software

A single, enterprise-controlled pane reduces deployment time, errors, and MTTR.

<p>Meter Network Wired and wireless LAN</p>	<p>Meter Cellular Indoor cellular service</p>
<p>Meter Connect ISP management</p>	<p>Meter Command Autonomous networks</p>

Meter Operations

Meter handles network design, deployment and ongoing operations so you can focus on your learning outcomes.

Learning depends on the network

Meter builds and operates the network as critical infrastructure for educational institutions large and small.

We make it easy to set up, run, and manage the network over its lifecycle, with zero upfront costs and refreshes included in your subscription.

A Meter is the only end-to-end enterprise networking solution available on the Microsoft Azure Marketplace

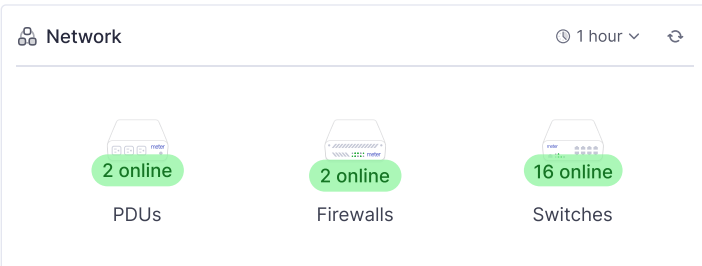

Manage a network that works for you

Meter's fully integrated model, network automation, and numerous included applications provide a stress-free management experience.

Fix your network in record time

Flash LEDs, cycle POE, read audit logs, adjust channel width, perform real-time cable tests, and more – all from your dashboard.

As reliable as it is secure

Redundant network designs, MultiWAN capability, High Availability Security Appliances, and cloud-managed configuration for all devices.

Get deep visibility into every facet

Proactive alerting, real-time monitoring, and port-level observability for hardware, software, and network management.

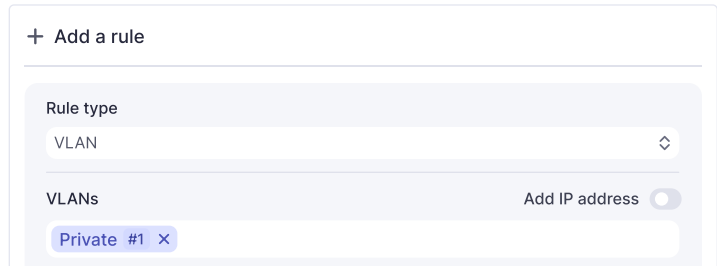

One click, update policies in bulk

Leverage pre-configurations or retune across speed, VLAN, modes, and more to customize your network to your specific requirements.

An integrated, secure architecture

Built-in security features such as network segmentation, encrypted device management, and secure tunnel encryption ensure complete protection.

Get 2-3x faster installations

Networks installed in three stages: Planning, Deployment, and Management, culminating in lifecycle refresh, included at no additional cost.

Proactive operational support

Proactive network troubleshooting and 24/7 operations throughout all of your locations. Meter has your back at all times.
