

Explore data security risk solutions with Microsoft Purview.

Data Security Envisioning Workshop

Sensitive data in your Microsoft 365 tenant presents a risk to your organization if handled improperly. Risk can occur from non-compliance with industry standards, too little or too much discovery data, or improper disclosure from simple oversharing.

You've seen the demos and done the labs, but what your organization really needs to see is the risk impact around real people and data in your Microsoft 365 tenant. That's where our Data Security Envisioning Workshop comes in.

Regardless of why or how it happens, you need to put standards in place and support them with technology like Microsoft Purview. Let our skilled consulting engineers help you discover and understand how Purview may mitigate data security risk in your Microsoft 365 tenant.

CDW's Data Security Envisioning Workshop can help you achieve:

 **Operational Efficiencies**

 **Agility**

 **Reduced Risk**

Finding the Right Solution

First seek to understand, as the saying goes. We can help you understand the risk of sensitive data already in your Microsoft 365 tenant and then come up with a roadmap to address it.

Service Features	Available
