

# Unlock the full potential of your Microsoft Solutions with the value of CDW.

## Dynamics 365 Business Central through CDW's CSP Program

Dynamics 365 Business Central helps organizations unify financials, operations, sales and supply chain into one intelligent platform. Now available through CDW's CSP Program, Business Central provides predictable billing, scalable cloud deployment and integrated security while enabling teams to move faster with real-time insights.

Dynamics 365 Business Central through CDW's CSP Program can help you achieve:

### Improved Visibility

Improved financial visibility with real-time dashboards and automated reporting.

### Operational Efficiencies

Streamlined purchasing, inventory and order management.

### Faster Innovation

Scaled operations with a secure cloud ERP foundation.

## Overview

Dynamics 365 Business Central through CDW's CSP Program addresses the following:

Business Priority	Solution
<b>Unified Finance</b>	Dynamics 365 Business Central unifies financial management, accounting, reporting and budgeting into one cloud-based platform. Organizations gain real-time financial visibility across general ledger, accounts payable/receivable, multi-currency transactions and consolidated entities. Built-in analytics and Power BI reporting help leadership monitor KPIs, forecast cash flow and accelerate month-end close with accurate data and automated processes.
<b>AI Productivity</b>	Business Central integrates Microsoft Copilot to bring AI-powered assistance directly into everyday workflows. Copilot can summarize records, auto-fill fields, analyze business data and guide users through tasks using natural language queries. AI agents can automate processes such as capturing sales orders from email, validating details and generating quotes or orders automatically.
<b>Secure Operations</b>	Business Central is built on the Microsoft Cloud with enterprise-grade security, privacy and compliance controls. Data access follows role-based permissions and governance policies to ensure employees only see the data they are authorized to access. Copilot also adheres to these same security boundaries, meaning AI responses are generated only from data a user already has permission to view. Business data, prompts, and AI outputs remain within the organization's compliance boundary and are not used to train external AI models, helping protect sensitive financial and operational information.

## FINDING THE RIGHT SOLUTION

Whether you're an organization outgrowing entry-level accounting platforms, managing finance and operations across multiple systems, seeking real-time reporting and forecasting, or planning cloud transformation initiatives, Dynamics 365 Business Central provides a scalable, unified solution.

With CDW's [Dynamics 365 Business Central Readiness Assessment](#), you can discover if the solution is the right fit for your organization.
