

CDW Microsoft Solutions

One Microsoft, Fully Connected and Secure

Get security, clarity and control
without the complexity.

Technology shouldn't feel fragmented. CDW's One Microsoft brings your Microsoft investments into a single connected system: Surface and OEM devices, Microsoft 365 E5, and Microsoft Defender, working as one across devices, identity (Entra ID), security and cloud. Your hardware, your identity and your protection operate as one foundation, so you can move faster without taking on more risk.

Why This Matters Now

Business keeps speeding up, and AI is adding complexity faster than most teams can absorb it. You're managing more devices, more identities and more applications than ever. Every one of them is another door, and the controls meant to watch those doors were never built to move at this speed.

Teams are unable to responsibly deploy the AI agents they are being asked to deliver with a foundation that isn't certain who and what is asking for access. Identity comes first. CDW meets you where you are and gets you where you're going.

Microsoft Agent 365 brings AI agents under the same control plane — every agent gets a governed identity (Entra), a compliant device (Intune), a trusted foundation (Windows) and continuous threat protection (Defender), so you can adopt agents without losing control.

When your systems aren't connected, you feel it:

- Limited visibility across endpoints and identities
- Security analysts buried in alerts without the context to act on them
- Policy that holds in one place and quietly lapses in another
- Device management disconnected from access management
- Security and compliance exposure that grows longer as it goes unaddressed

One Microsoft closes those gaps so you stop operating reactively and start operating with confidence. With CDW's security, identity and endpoint services, we design, deploy and manage your Microsoft environment so these tools actually work together.

The One Microsoft Advantage: Integrated by Design, Secured by Default.

Picture an environment where technology keeps up with your people instead of getting in their way. Surface, the Microsoft cloud and chip-level security make that the standard, not the aspiration.

Security built in from the start. Protection runs from chip to cloud, with firmware safeguards, TPM, and hardware-based identity. Surface ships with hardware-based security and key Windows protections enabled by default, helping protect your business from day one.

Zero trust across the board. Identities with Microsoft Entra, devices with Intune and threats with Microsoft Defender are protected on zero-trust principles, verified continuously rather than assumed safe.

A consistent experience anywhere. People get the same high-performance experience in the office, at home or anywhere in between, without trading away security to get it.

Control without the sprawl. Use one platform for visibility and enforcement across the whole ecosystem, with the ability to see a problem and act on it quickly.

Services that work for you. Run it yourself, co-manage with CDW or hand it over to our full-stack managed services built for Microsoft environments.

What You Can Do With One Microsoft

Turn complexity into clarity and effort into impact.

Strengthen security posture.	• Protect identities, endpoints and applications with zero trust. • Reduce vulnerabilities with secure-by-design devices. • Gain visibility into threats before they escalate with Microsoft Defender.
Simplify IT operations.	• Consolidate tools across endpoint, identity and security management. • Streamline provisioning, deployment and lifecycle management. • Automate policy enforcement and updates with ease. • Deploy in a way that’s cost-effective rather than disruptive.
Empower your workforce.	• Deliver consistent, high-performance user experiences. • Support hybrid and remote work without compromise. • Reduce friction while maintaining strong security controls.

Why CDW?

Technology only delivers when the pieces work together.

CDW goes past integration. We align your endpoint, identity and security strategies to outcomes you can measure against your own goals. The approach is practical and built around results:

Assessment and strategy. We evaluate your current endpoint, identity and security posture and find the gaps across your Microsoft ecosystem with CDW’s professional services and MCI workshops.

Modern endpoint deployment. We design and roll out Surface-led device strategies that fit your security and user-experience goals.

Zero-trust enablement. We put Microsoft security to work with proven practices for identity, device and data protection.

Management and optimization. We streamline endpoint management and keep performance, compliance and security tuned over time.

Lifecycle services and support. From procurement through deployment to refresh, we keep your device ecosystem secure, modern and efficient.

Outcomes That Matter

This is about more than technology. It is about what it enables for your business:

- Greater confidence in your security and reduced risk exposure
- Reduced complexity for your IT teams
- Clear visibility and greater control across devices, users and data
- More productive and empowered employees
- Faster time to value from Microsoft investments

Take the Next Step

You don’t have to navigate this complexity alone. CDW’s One Microsoft helps you bring the full value of your Microsoft investments to life through a unified strategy, deployment and ongoing management model.
