

How CDW Helps Organizations Move from Pilot to Production with Microsoft 365 E7

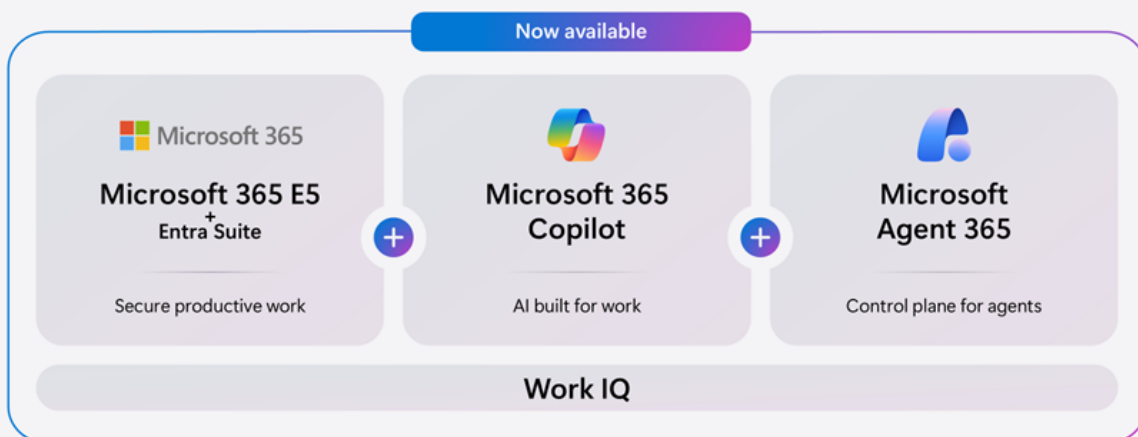

MOVE FROM AI EXPERIMENTATION TO ENTERPRISE SCALE EXECUTION SECURELY AND RESPONSIBLY

Your Copilot journey might start with early pilot groups, a few well-crafted prompts or an AI agent that proves it can save time or reduce cost in a real workflow. Then comes intent, as that spark is aligned to business priorities, shaped by governance and tested through minimum viable pilots.

That's also when the real work begins: operationalizing, securing and managing AI at scale. Identity, data protection, compliance and guardrails matter as much as innovation. Microsoft 365 E7 is designed to help organizations operate confidently on the AI frontier, with capabilities that support secure adoption and responsible scale.

Microsoft 365 E7 brings together Microsoft 365 security, identity and data governance capabilities designed to support Copilot and agent adoption at enterprise scale. It helps you protect sensitive data, manage access and apply policy controls so AI can be used safely across your organization.

Microsoft 365 E7 The Frontier Suite

Available with or without Teams

INTRODUCING MICROSOFT 365 E7: THE FRONTIER SUITE

Microsoft describes Microsoft 365 E7 as the “Frontier Worker Suite.” But what does it look like to operate as an AI frontier organization?

- Your agents have moved past workflow experiments and one-off personal assistants into a core accelerator producing real business impact. That only happens with the proper structure in place for it to flourish — observability, security, governance, use cases and more.
- Your workforce has achieved the critical mass in AI fluency required to leverage what AI can do today and also be skills-ready for what AI will do tomorrow. That takes communication, practice and the proper support to achieve.
- Although AI may introduce new risks, your security and compliance posture rise in equal measure to meet the challenge. That takes review and remediation with a new perspective for AI’s impact, before it becomes the “posture gap detector.”

SERVICE SPOTLIGHT: GENERATIVE AI SOLUTIONS AND FOUNDATIONS WITH COPILOT STUDIO

Ready to move beyond experimentation? CDW can help you plan and build agents in Copilot Studio, with an enterprise-first approach that accounts for data access, security and governance from the start. The result is a clearer path from prototype to production readiness, aligned to how your organization operates.

Find Your Frontier With CDW and Microsoft

- **Start your Copilot journey.** Launch Microsoft 365 Copilot Chat and Microsoft 365 Copilot with defined use cases, security controls and governance foundations.
- **Build custom AI solutions.** Design and deploy enterprise-ready agents aligned to data and security requirements.
- **Assess risk and readiness.** Evaluate exposure, posture and controls across your Microsoft 365 environment with Agent 365.
- **Strengthen data governance.** Protect sensitive data with labeling, DLP and policy enforcement.
- **Define next steps.** Drive continuous innovation with an actionable roadmap and a strong center of excellence.

WHY CDW AND MICROSOFT

Proof Points:

- 6 Microsoft Solutions Designations
- Microsoft Frontier Partner
- 18 Specializations
- Azure Expert MSP
- 25+ Years Microsoft Experience

Microsoft 365 E7 delivers powerful tools, but tools alone don’t create outcomes.

CDW brings together deep expertise across Copilot, security, governance and change management, with real-world experience helping customers move from AI curiosity to AI capability. Our practical approach ensures that licensing investments translate into measurable business value.

Whether your focus is taming risk, becoming AI fluent or operating as a frontier firm, CDW helps turn Microsoft 365 E7 into a competitive advantage, not just a license upgrade.
