

# WE GET EPIC ON MICROSOFT AZURE.

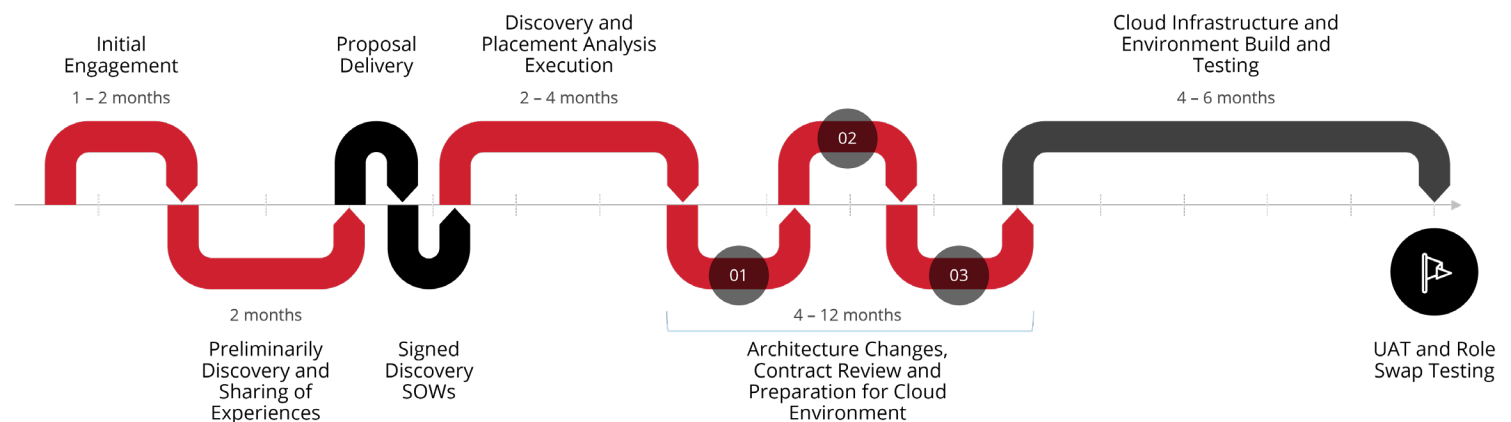

Flexible options for every step of your cloud journey.

Whether your goal is to utilize Microsoft® Azure® as a cost-effective disaster-recovery (DR) system for your Epic® workload, or to migrate your Epic production completely to the cloud, experts from CDW Healthcare can help you every step of the way. The CDW Healthcare practice can draw not only on the extensive resources of CDW's dedicated Cloud and Security practices, but also the unmatched endpoint expertise of CDW as well as CDW's own Healthcare practice.

Though the healthcare industry hasn't been an early adopter of cloud technologies, the economics of transitioning operations to the cloud now makes perfect sense for most healthcare organizations. Whether for Disaster Recovery as a Service (DRaaS) or for hosting production workload, making public cloud providers like Microsoft Azure part of your overall strategy doesn't just make a lot of sense – it's virtually inevitable. And having an experienced partner that can help at every step of that journey is essential to a successful transition.

Wherever your organization is in the transition to cloud services, CDW Healthcare consultants can draw from our Cloud, Security, Digital Infrastructure, Data & Analytics, and Managed Services practices to assemble the best possible solution that takes into account your current state, your target cloud platform, and every step in between.

## Typical Epic to Azure transition timeline
