

Windows on Snapdragon Readiness Assessment

Validate compatibility, reduce deployment risk, and identify where Snapdragon-powered PCs fit best in your environment.

Funded by Qualcomm | Up to \$10,000 value | 500+ device opportunity | Offer window: 6/1/26 - 9/30/26

Before you invest in your next PC refresh, CDW and Qualcomm can help you confirm readiness for Windows on Snapdragon. This customer-focused assessment gives your team a practical way to pilot devices, validate applications, and build a data-backed roadmap before broader rollout.

What you'll gain

- **Hands-on pilot experience** with a Snapdragon-powered device from your preferred OEM.
- **Application compatibility validation** for critical and complex apps before deployment.
- **Deployment readiness insight** across devices, users, workloads, and operating environment.
- **Risk mitigation guidance** to uncover blockers early and define next steps.
- **Business outcome alignment** around battery life, performance, mobility, and built-in AI experiences.
- **Executive-ready recommendations** with findings, risks, opportunities, and a next-step roadmap.

Don't guess if your environment is ready for Windows on Snapdragon - validate it with real devices, real users, and real data.

Please fill out the [Snapdragon x CDW Pre-POC Questionnaire](#) form to qualify for the Assessment Funding

For customer discussion purposes. Program terms and eligibility are subject to confirmation by CDW and Qualcomm.

What's included

1. Assessment & Discovery

- Current device and operating environment review
- Application, workload, and user persona analysis
- Deployment readiness review

2. Pilot & Validation

- Snapdragon device testing in your environment
- Application compatibility validation
- Performance and user feedback assessment

3. Final Deliverables

- Readiness Assessment Report and compatibility findings
- Persona-by-persona recommendations
- Risk mitigation guidance and deployment roadmap

Ideal for organizations looking to:

- Refresh aging PC fleets
- Evaluate AI-capable Windows devices
- Reduce rollout risk before a large deployment
- Validate app readiness and compatibility
- Understand where ARM-based PCs fit best
