

# Work-from-Home Orbi Pro Family

orbi™  
PRO

As working-from-home is becoming the new norm, you may be having a difficult time transitioning your home to a work environment. While your family, pets, or television may distract you from work at home, a slow network connection will leave you more frustrated and less productive. NETGEAR knows setting up a home office is not easy, and have introduced many WiFi solutions to fit your work-from-home needs, including a whole family of optimal WiFi systems and satellites, the Orbi Pro.

## Difficulties of Working-from-Home:

### Slow WiFi speed

Sharing WiFi connection with the rest of the family effects WiFi bandwidth especially for file download and video meetings.

### Lack of security

No separate guest WiFi access, which creates low security for confidential work documents.

### Costly and hard to install

With little technical knowledge about WiFi solutions, you may not know which WiFi solution is the most cost effective and easy to install.

### Orbi Pro Family, WiFi for You and Your Family

Upgrade your home WiFi network to work-from-home with Orbi Pro to improve WiFi speed, coverage, security, and ease of installation. Get high speed WiFi all throughout your home with ultimate coverage and device handling capacity for stable internet connection for the whole family to stream videos, play games, browse and more while internet connectivity for your working needs stays uninterrupted. Orbi Pro also provides great WiFi for the whole family with separate networks keeping your important work files secure and your home WiFi secure with a guest network.

# orbi™ PRO Features

## WiFi 5

- Reliable and high-performance AC3000 WiFi
