

POLY HEALTHCARE SOLUTIONS

**IMPROVE YOUR TELEMEDICINE
CONSULTATION EXPERIENCE**

Healthcare is far more than patients visiting doctors' offices.

A patient's location doesn't always align with a provider's, yet the need for high quality care does not diminish with distance. Clinicians need to consult with one another to provide the best patient care without travel—immediate decisions need to be made, as life and death situations arise.

In less dramatic (yet important) occurrences, providers need to stay current with their skills, collaborate with colleagues, and manage their facilities. Healthcare professionals can recognize significant efficiencies in all these functions through audio and video conferencing technology.

Globally, Poly solutions deliver more than 50,000 patient encounters per month. Poly is uniquely positioned to deliver the highest quality end-to-end communication and collaboration experiences for the ever-changing healthcare landscape. Poly audio and video collaboration solutions promote 21st century healthcare delivery through remote patient care, continuing medical education (CME), and day-to-day business administration.

“While the need to see a particular patient in person is based on multiple complex factors, physicians should work to transition patients who do not need to be seen in person to a virtual visit (e.g. use telehealth video or telephone services) or else consider delaying the visit until such time as the benefits are outweighed by the harms that could occur when timely care is not delivered.”

AMERICAN COLLEGE OF PHYSICIANS

Statement on Nonurgent In-Person Medical Care

TELEMEDICINE

More patients. Fewer providers. Rising healthcare costs. How does a healthcare professional begin to meet the growing need?

Connect securely and easily with patients from their own computer, personal device, or a standards-based video system. HD audio and video allows doctors and patients to have a productive, in-person experience. Perfect for telepsychiatry, speech therapy, tele-stroke exams, and dozens of other applications. Particularly in times of crisis, telemedicine is the preferred method to isolate healthy patients from potential risks.

For patients with symptoms, video collaboration provides easy access to doctors and nurses. Urgent/specialty care facilities must be able to accommodate walk-in and scheduled patients by connecting them with the appropriate provider for efficient, effective care. Time-critical decisions can be made far more quickly when HIPAA-compliant consultations are made over a HD video link. Telemedicine allows patients to access their own doctors without first having to go to an emergency room.

Moreover, clinicians become more productive. Without having to travel to various locations, they are able to see more patients. And with an aging population and a patient base widely distributed far from healthcare facilities and medical expertise, Poly solutions help connect patients, practitioners, specialists and healthcare administrators.

“When we use Poly, we remove the distance barrier so I’m able to provide the same level of care to patients who live four hours away as those who live 40 minutes away. And this technology allows me to be in more than one place at a time.”

DR. SHAYLA SULLIVANT
Child and Adolescent Psychiatrist

CHILDREN'S MERCY
KANSAS CITY, MISSOURI, U.S.A

OVER 250 POLY-ASSISTED SESSIONS PER MONTH FOR

- Child psychiatry
- Speech therapy
- General exams

FEATURED PRODUCTS

- Poly RealPresence Group Series
- Poly RealPresence Web Suite

BENEFITS

- Expanded specialist reach to rural pediatric patients
- Reduced travel time and costs for patients
- Anesthesiologist collaboration and training

CUSTOMER FOCUS

CONSULTATION

It is rare that a single facility has all the expertise needed for every patient. When physicians want to consult with colleagues across the country, or the globe, video interactions means gaining access to the skills and experience that they need. Pulling together all the best minds and expertise regardless of location means more effective diagnoses. Providing the highest quality of care becomes easier with deeper and broader access.

From human resources, board meetings, budget planning, and more, greater staff collaboration can benefit from the highest quality audio and video conferencing available. With Poly solutions, content is easily shared with all participants, ensuring everyone has the information needed to contribute.

ADMINISTRATION

Distance education offers medical professionals the opportunity to learn without having to travel. Staying abreast of new diagnostic techniques and research means even the most rural practitioners have the best tools for patient care. Education for doctors is always critical—in times of global unrest as well as during normalcy. Clinicians need to be taught techniques to battle disease and disorders every corner of the world, quickly and accurately.

“Surgeons all over the world continue to learn new techniques and improve end-results...and that is the point to broadcasting our surgeries.”

DR. ROBERT VINCENT, SURGEON
Clinique Jean Causse, France
