As the world changes and becomes more unpredictable, planning for the next disruption is even more critical. In light of the rapid pivot to working from home, many organizations are re-evaluating their IT crisis management strategies—particularly around remote endpoint management.

A hybrid workforce environment requires flexibility so end users can work seamlessly and productively from anywhere. Traditional endpoint strategies must eventually include modern, cloud-based management techniques that acknowledge a more complex endpoint landscape.

**TRADITIONAL ENDPOINT MANAGEMENT**

Characterized by on-premises, granular management of computers and servers, activities typically include discovery/inventory, scripting, software installation, patching, software asset management (SAM), vulnerability scanning, and agent or agentless management of IoT devices. This method is supported by the KACE Systems Management Appliance.

**MODERN ENDPOINT MANAGEMENT**

Modern endpoint management encompasses cloud-based control of iOS and Android mobile devices alongside traditional Microsoft and Mac laptops. Features include easy device enrollment, inventory information and functions like resetting a password or wiping a stolen device. These capabilities and more are available in KACE Cloud Mobile Device Manager.

**KACE UNIFIED ENDPOINT MANAGER**

No matter where you are in your endpoint management journey, KACE Unified Endpoint Manager gives you the flexibility to continue with traditional endpoint management while you add modern management.

Now these two functions are united with a common, intuitive interface – allowing you to easily discover, manage and secure all your endpoints from one console. Reclaim the time you’ve been spending manually managing multiple solutions to achieve endpoint security and gain peace of mind that your network is protected.

With KACE Unified Endpoint Manager, you can co-manage your traditional and modern endpoints, including Windows and Mac laptops, Linux, non-computer devices (printers, network devices...) servers, IoT, and iOS and Android mobile devices. It’s the best of both worlds.

**BENEFITS:**

- Proactively inventory and manage corporate or employee-owned mobile devices as well as traditional laptops, computers, servers and IoT devices through a single pane of glass.
- Automate and minimize management effort with an easy-to-use interface that offers powerful and consistent functionality.
- Enhance security by identifying, inventorying, patching and controlling all endpoints. Minimize risk by easily locating or wiping any lost or stolen mobile device.

KACE® Unified Endpoint Manager by Quest

Control your traditional and modern endpoints as you support your hybrid workforce.
FEATURES

• Deployment and Discovery
  Easily scan to discover devices accessing your network. Remotely provision existing endpoints or new ones for deployment without having to handle them. Ship an endpoint directly to your end user from the supplier without having to be the middleman.

• Granular Inventory
  Access a detailed inventory of data on each traditional device in your environment. Manage and view data with flexible reporting at a high level or get automated deep dive analysis when needed.

• Flexible Configuration
  Define specific policies and administrative functions that can be applied to a single device or group of devices.

• Software and Application Distribution
  Automatically track, deploy and maintain current versions of software and applications, keeping your environment secure and compliant.

• Patch Management
  Secure your environment with automated patch identification and deployment. Ensure your patching is always current.

• Powerful Mobile Device Control
  Remotely locate, reset passwords, lock, erase, or factory reset any enrolled mobile device.

• App Store Integration
  Provision and deploy required store and in-house developed apps according to enterprise distribution policies. Manually or automatically identify out of date apps and push updates.

• Reporting
  Use existing templates or build ad hoc reports on your entire landscape or a subset of devices. Format your reports to meet any compliance or organizational needs.

• Built in Service Desk
  When faced with an endpoint issue, your users can easily report it and get resolution, minimizing the impact to their workday.

• Comprehensive Device Coverage
  Fully manage all operating systems from a single console: macOS, Windows, Chromebook, Linux, iOS and Android.

CONCLUSION

With KACE Unified Endpoint Manager, you can support your hybrid workforce by moving to modern management while managing your existing traditional endpoints. Be confident that your endpoints are protected from the next cyberattack. Be ready with KACE.

ABOUT QUEST

Quest creates software solutions that make the benefits of new technology real in an increasingly complex IT landscape. From database and systems management, to Active Directory and Office 365 management, and cyber security resilience, Quest helps customers solve their next IT challenge now. Quest Software. Where next meets now.
