

# All or Nothing: Unified Identity Platform versus Point Solutions

With more threats, greater complexity, and growing costs, organizations need a unified identity platform to defend against identity-based attacks, drive efficiencies, and ensure business continuity.

Without a unified identity solution, organizations pay more for weaker security.

## Why Leaders Prioritize Identity

**72%** of IT executives say security is the primary factor when choosing an IAM provider.<sup>1</sup>

**82%** of breaches involved the use of stolen **credentials**, phishing, and other human-related vulnerabilities.<sup>3</sup>

**100%** of CISOs and tech leaders value **cost-effectiveness** over cost alone.<sup>2</sup>

## Benefits of a Unified Identity Platform

Organizations using a unified identity platform can realize significant benefits.

- ✔ Reduced risk of human error in managing entitlements
- ✔ Improved operational efficiencies for credential management
- ✔ Lower costs with automation

Organizations can extend those benefits by ensuring that their identity platform can support their environment today and scale over time to support future cloud investments.

## RSA Unified Identity Platform

### Automated Identity Intelligence

- ✔ Mobile threat detection
- ✔ Phish-resistant tokens
- ✔ AI-powered risk analysis

#### Authentication

- ✔ Advanced multi-factor authentication
- ✔ Software and hardware authenticator
- ✔ Adaptive policies with context

#### Access

- ✔ Simplified access management
- ✔ Unified credential experience
- ✔ Federated identity

#### Governance & Lifecycle

- ✔ End-to-end visibility
- ✔ Complete auditability
- ✔ Compliance readiness
