

# Your network has evolved What about your network management solution?

The explosion of users, devices & apps has made your network **more challenging to manage than ever before**

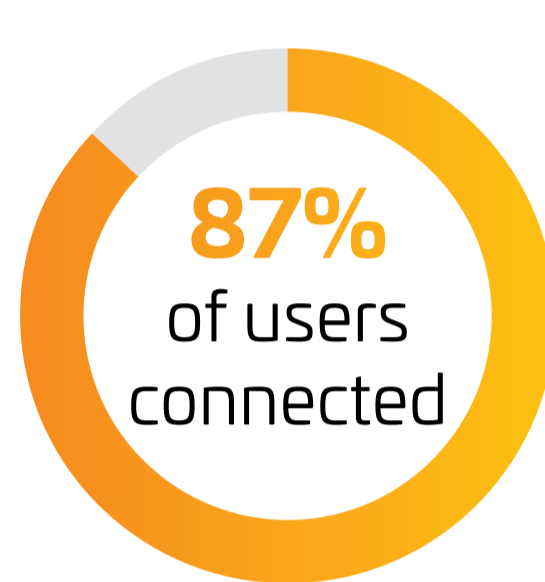

**Your job:** Deliver consistently great user experience, SLAs and resource efficiency across the network.

**Your adversary:** Unprecedented levels of demand, diversity and complexity in your wired/wireless network.

### The number of network users is growing

2019

2020

### The all-wireless office - mobile first/Wi-Fi first - is trending

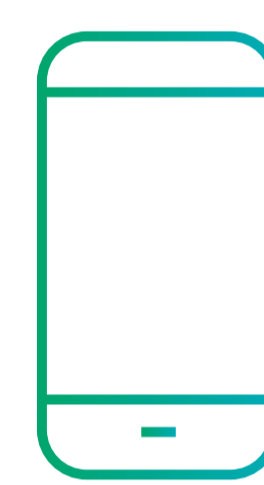

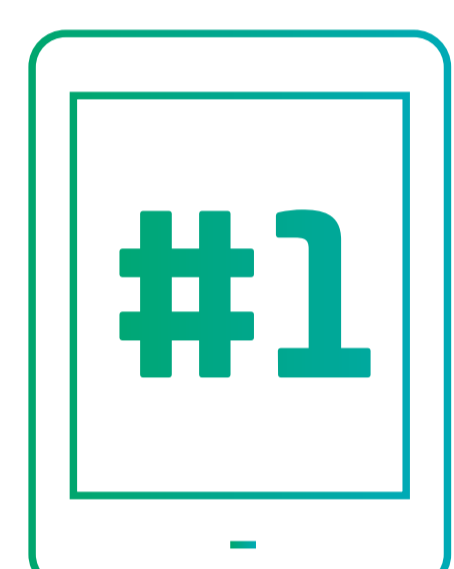

Now

2021

The number of network-connected devices is growing, **+21% by 2021**

Tablets are

**3 out of 4** will be mobile

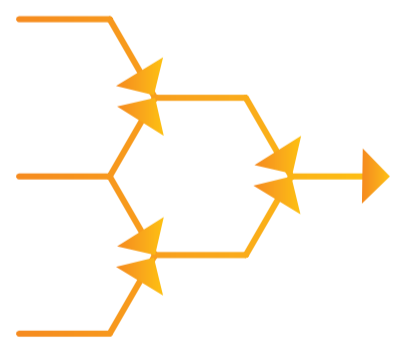

As network scope and complexity increase, IT doesn't have the right tools to manage effectively.

## Pain

- **Lack of clear visibility** into network operations
- **Inefficient and costly** network management
- Increased risk of provisioning and **update errors**
- **More service issues**, longer MTTR, user dissatisfaction

## Five great reasons you should adopt cloud-managed networking

### Automate and simplify

No-touch provisioning, monitoring and management speeds deployment and keeps everything patched and updated without additional onsite IT specialists.

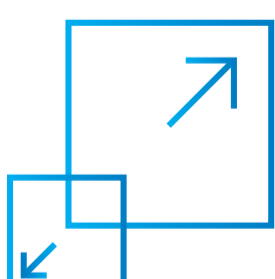

### Gain single-source visibility

One dashboard provides a 360-degree, near real-time view of users, devices, applications and infrastructure across all sites as well as network performance/health and resource consumption.

### Protect your network

Automatically update your controller and connected devices (such as Wi-Fi APs and switches) to support the latest feature sets and the most current security patches.

### Scale more efficiently

Scale your network management solution up or down to match your changing business needs, without compromising user experiences or worrying about incurring extra costs.

### Drive costs down

Lower your total cost of ownership. Scale smarter to save CapEx. Reduce OpEx with simplicity and visibility. Streamline IT training, management and helpdesk operations.
