

Adding even more brainpower to the industry-leading PTZ cameras

SRG-A40 / SRG-A12

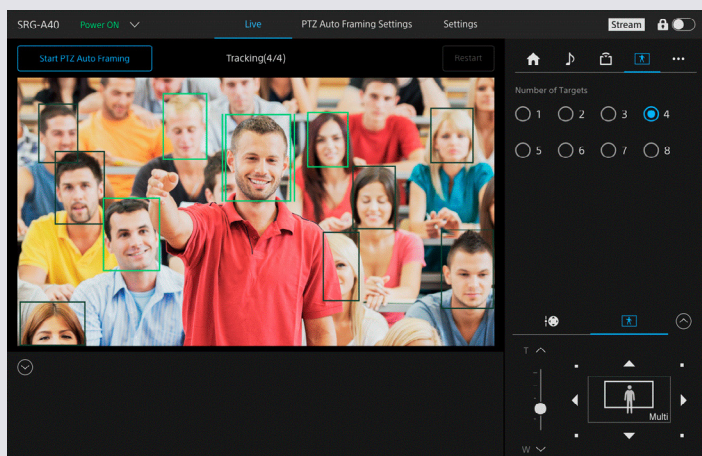

PTZ Auto framing camera with AI analytics

Available now! The SRGA40/A12 firmware upgrade V2.0 will add new features that will redefine precision, set new standards, and enhance user experience.

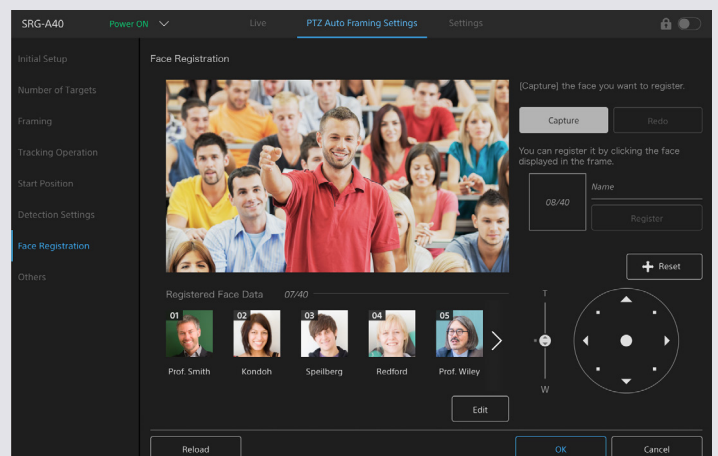

MULTI-PERSON FRAMING

Natural framing of up to 8 people

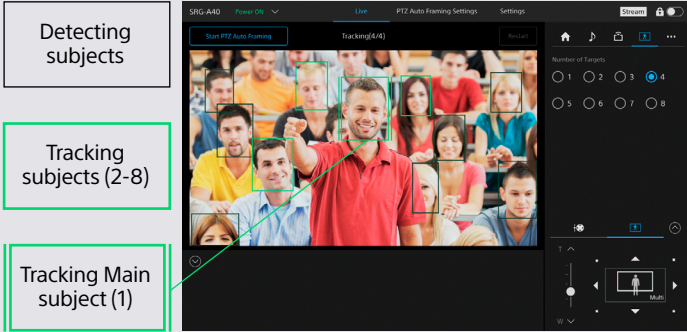

FACE REGISTRATION

Identifies and tracks indexed faces

BOOST ACCURACY. IMPROVE FOCUS CONTROL. INCREASE EFFICIENCY.

MULTI-PERSON FRAMING

Frame up to **8 people** at the same time

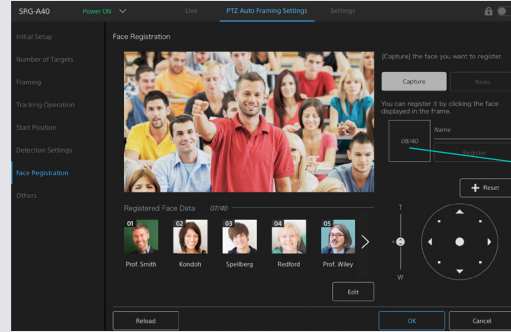

Automatically selects and adjusts framing around the main subject while also including surrounding individuals, maintaining a natural and dynamic visual composition.

Focuses on fitting the specified number of people within the frame rather than fixed angles or compositions, **adapting seamlessly to varying group sizes and dynamics.**

FACE REGISTRATION

Register faces into camera's internal database

Store up to **40 profiles**

Register a person's face and assign priority to frame the right person when they enter the detection area. This works whether they're alone or in a group.

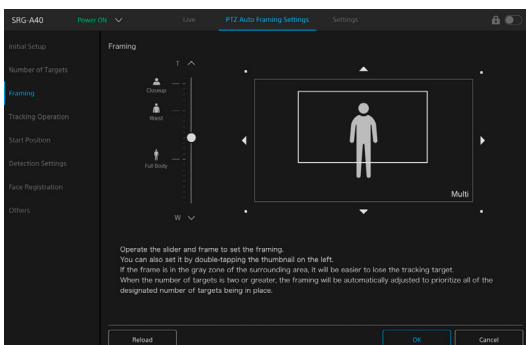

Ensures the camera starts tracking correctly and returns to the correct face even if it briefly tracks the wrong person. This **reduces errors and maintains focus on the intended subject.**

Flexible framing composition change on Web UI during PTZ Auto Framing

V1.0 selectable compositions

V2.0 finer adjustable compositions

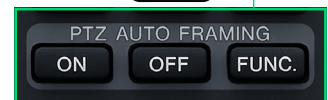

Detection/Identification accuracy

- Overcomes lighting changes
- Able to detect smaller-sized subject
- Recognizes target vs. non-target across multiple subjects

Framing quality

- Small movement stabilization
- Fast up & down movement
- Fast left & right movement

FUNC key on IR remote easily controls ON/OFF for tracking, framing mode switching.
