KNOW THE CYBER EXPOSURE OF EVERY ASSET, ON ANY PLATFORM, AT ALL TIMES

Maximize the maturity and efficiency of your risk-based VM program

LEGACY VULNERABILITY MANAGEMENT TOOLS HAVE FAILED

While vulnerability management tools have been in use for more than a decade, cyber risk continues to relentlessly rise. Cloud assets and web apps remain unassessed, enabling potentially dangerous vulnerabilities to remain undetected. To combat this issue, security leaders purchase a variety of single-purpose tools to gain visibility across their attack surface. But since these tools were never intended to work together, security teams are forced to manually stitch together the massive amounts of disparate security data to determine what is happening across their environment.

This patchwork approach leaves teams chronically behind — buried in vulnerabilities that their policies and SLAs require they fix, even when they know that only a small portion of them pose any risk.
The Tenable Exposure Platform (Tenable.ep) is a comprehensive risk-based vulnerability management solution that enables enterprises to know the cyber exposure of every asset, on any platform, at all times — and evolve from trying to fix everything with a critical CVSS score to taking a risk-based approach that focuses time and resources on fixing what matters most. With Tenable.ep, you’ll be able to:

**Eliminate blind spots**

to address your entire attack surface, including modern assets across cloud, containers, web apps and operational technology environments

**Get a unified view**
of all your assets and vulnerabilities in a single dashboard alongside key threat, exploit and prioritization metrics

**Add risk-based capabilities at any time**
without the painful procurement process that’s normally associated with purchasing new tools

**Compare your cyber exposure**
across business units and in relation to industry peers, so you can determine where and when to make key investments

**Measure security program maturity**
to discover areas for process improvement, so you can achieve your full risk reduction potential

---

**All-in-One Platform Scales to Meet Your Enterprise Needs**

As organizations mature, security leaders often scramble to add new functionality that provides advanced insights into their vulnerabilities and how to prioritize their team’s efforts. But that process typically requires a formal budget request, working across the organization to ensure that new tools are properly implemented and then diligently integrating them with the rest of your security stack.

Tenable.ep solves this challenge. It enables you to add new capabilities or environments at any time, without the cost of procurement or the need to collate security data across multiple tools. Instead, everything you need for a comprehensive risk-based vulnerability management solution is built-in and ready to use, and the entire package is managed by a single, flexible asset-based licensing model for greater simplicity and efficiency.
With Tenable.ep, security teams can allocate their product license to any combination of traditional IT assets, web applications, container images and cloud instances, and modify their allocation as business priorities or compliance needs evolve. And since all components were developed to work together, all of your asset and vulnerability data is unified in a single dashboard, making it easy to assess and accurately prioritize your team’s efforts, so they can reduce the greatest amount of risk with the least amount of effort.

**Advanced Capabilities Help Conquer Your Cyber Risk**

In addition to streamlining your vulnerability management, Tenable.ep delivers deep business insights that empower you to calculate, communicate and compare your cyber risk exposure over time with that of your industry peers. These advanced capabilities enable you to better understand the overall effectiveness of your security program and provide a key guide for strategic decision-making. By measuring the maturity of your assessment and remediation processes, Tenable.ep helps you determine where to make key adjustments or additional investments to maximize your efficiency.

**ACT NOW TO CLOSE YOUR CYBER EXPOSURE GAP**

Legacy vulnerability management tools are no match for the speed and complexity of modern computing environments. Tenable.ep delivers all the visibility and capabilities you need, managed by one license for simple procurement and easy deployment. Visit our [solution webpage](https://example.com) to learn how the Tenable Exposure Platform can empower your security organization to start putting a risk-based strategy into practice today.
