Applications

Protect applications with security that learns and adapts throughout the CI/CD cycle.

Security that evolves as fast as your code

Trellix Application security for your cloud native applications that provides visibility into the cloud service environments in which they are deployed.

Secures data-aware workloads
Secures cloud-native applications with a zero-trust approach and minimizes public cloud risk through ongoing workload and container scanning.

Continuously protects workloads
Assesses and protects workload environments to mitigate risks everywhere. Unifies and simplifies app visibility and control, eliminating multi-vendor complexity.

Provides non-invasive security
Increases development cycle speed and flexibility by integrating posture management and cloud workload protection, so Sec DevOps teams can work without interruption.
