Trellix Infrastructure Security

Protect your network, servers, and data centers with a living, learning ecosystem.

Living security for your critical infrastructure

Trellix Infrastructure Security learns and adapts for full visibility and control, ensuring that anomalies are identified quickly so your infrastructure is secure.

Learns through dynamic inputs
Learns automatically from forensics and XDR architecture analytics related to new and dynamic infrastructure threats. Detects common threats in the network and data centers efficiently.

Adapts with sophisticated response
Connects protection across cloud, IoT, collaboration tools, endpoint, and infrastructure – continuously adapting to the changing security landscape, and automating responses.

Configures to your needs
Supports analyst efficacy by reducing alert volume and fatigue, only surfacing alerts that matter. Enables integration with any vendor, so administrators can scale with workloads.
