

Data Security

Protect the Data that Matters to Your Organization

Protect

Protect the data that matters to your organization from theft, misuse and accidental exposure.

Comply

Comply with complex and constantly changing privacy laws and regulatory standards.

Simplify

Deploy flexible protection from a single console to get real-time visibility and unified management across your environment.

Data doesn't stay in one place any longer. As users take data with them on laptops, transfer files over email, share information on the web, create shared databases and store information on networks, sensitive information is put at risk for theft, misuse and accidental exposure. At the same time, complex regulatory environments and the expansion of data storage threatens to overwhelm the processes and technologies organizations have in place to protect their private information.

Trellix Data Security Products

Trellix Data Security protects data on endpoints, networks, email, web, and within databases - as well as provides encryption protection for devices and data transfers to removable media. Stop data exfiltration at the source, get real-time monitoring and consolidated policy administration - all managed through a central console.

▪ Trellix Data Loss Prevention (DLP)

- Trellix DLP Endpoint Complete
- Trellix DLP Device Control
- Trellix DLP Network Prevent
- Trellix DLP Network Monitor
- Trellix DLP Discover

▪ Trellix Data Encryption

- Trellix Drive Encryption
- Trellix Native Drive Encryption
- Trellix File & Removable Media Protection

▪ Trellix Database Security

SOLUTION BRIEF

The Trellix Advantage

- 35 years of security experience backing up our products
- 5,000 Trellix employees in 70+ countries providing 24/7/365 service
- Trellix Data Encryption protects more than 24 million drives world wide
- Trellix Data Loss Prevention supports more than 450 file formats
- Trellix Database Security includes more than 700 continuously updated patch protections

Trellix leads the industry in delivering Data Security as part of a holistic XDR solution with the most mature and comprehensive offerings that create unprecedented visibility, incorporate threat intelligence, and extend detection and protection coverage against insider threats. And with expert professional services engagements available, teams will be up and running quickly on their Trellix Data Security technology.

Why Consider Trellix Data Security?

- **Protect Against Insider Risk** – Get exceptional visibility across endpoints, email, web, networks and databases to discover, identify, classify, monitor and protect sensitive data. With real-time monitoring, user coaching, dashboards for event tracking and incident management your organization will have peace of mind that data is protected from malicious threats and human error.
- **Meet Regulatory Standards** – Trellix Data Security provides a streamlined solution to help organizations meet data governance, risk and compliance standards through a single management console, with out of the box policies for industry-based and global regulatory standards, the ability to manage role-based encryption, conduct event investigations, forensics auditing and reporting capabilities.
- **Manage the Expanding Information Footprint** – Storage growth and the increase in locations where sensitive data can be shared are creating challenges to protect data from theft, misuse and exposure. Trellix Data Security tools enable organizations to locate hard to find sensitive data, including in databases, label the data that needs to be protected and determine what data needs to be retained by policy, ensuring you can prioritize your data protection activities.
- **Address the Growing Costs of Managing Technology** – Trellix Data Security makes it easy to deploy user roles, information policies and monitor activity in real-time across your environment. And with robust support opportunities, professional training options and numerous customizable choices out of the box, teams will be up and running smoothly.
- **Enable Zero Trust Security** – To implement a Zero Trust Security (ZTS) model, organizations need to continuously monitor data usage and ensure that data access is tightly controlled. Trellix Data Security offers strong role-based, data policy options applied across the environment and real-time visibility across multiple vectors to help organizations enable their ZTS strategies.
