

Veritas Alta Recovery Vault

Seamless cloud storage managed by Veritas.

Overview

Veritas Alta™ Recovery Vault (formerly known as NetBackup Recovery Vault) is a cloud-based data retention service that provides a seamless, fully managed secondary storage option for NetBackup users.

Thousands of organizations worldwide rely on NetBackup to protect over 100 exabytes of data. Veritas Alta Recovery Vault is fully integrated with NetBackup, simplifying cloud storage as a service while delivering limitless scale. Veritas Alta Recovery Vault securely retains data in the cloud without compromising crucial security or compliance policies.

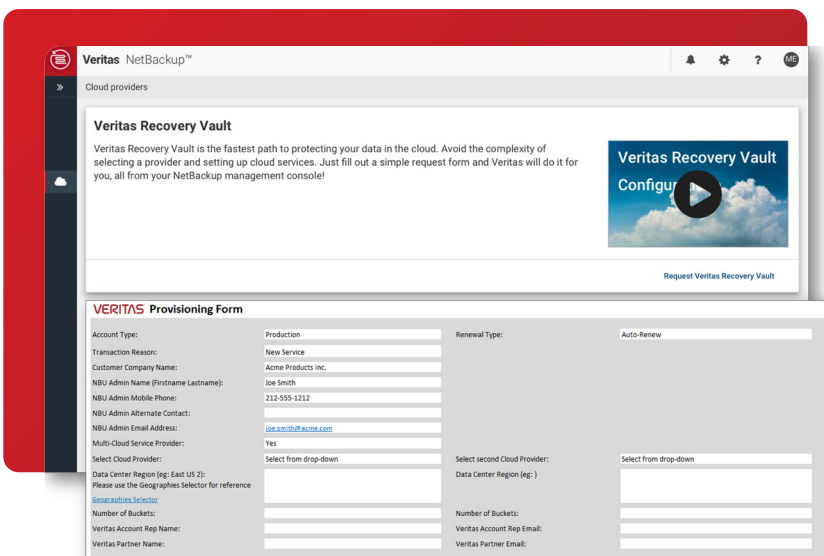

Keep Your Data Safe and Sound

Every organization understands that unprotected data is a disaster waiting to happen. Traditional approaches to cloud data protection aren't keeping pace with IT complexity, growing threats or economic expectations.

Veritas Alta Recovery Vault and the Intelligent Cloud Policy Engine ensure no data gets left behind, and air-gapped multi-cloud isolation provides complete protection from ransomware and other threats. With Veritas Alta Recovery Vault, an organization can be confident its data is secure in the cloud, plan for disaster recovery, meet compliance and governance requirements, and prevent data loss from ransomware.

Why Veritas Alta Recovery Vault?

- **Reduce risks**—Manage crucial cloud security, retention and compliance.
- **Scale limitlessly**—Efficiently manage data growth without compromising manageability.
- **Lower TCO**—Choose a predictable as-a-service subscription with zero hidden costs.
- **Automate resiliency**—Protect data from ransomware and other threats with intelligent cloud policies and air-gapped multi-cloud isolation.

Managed by Veritas

With Veritas Alta Recovery Vault, protecting critical data in the cloud has never been easier. Seamlessly integrated with NetBackup and Veritas Alta Data Protection, its easy-to-use UI simplifies provisioning, management, and monitoring of cloud storage resources and retention policies.

In just a few simple steps, you can automatically provision the cloud storage target of your choice, make it available to the user, and assign it to a backup workflow as a new storage target.

Reducing Complexity and Risks

Veritas Alta Recovery Vault not only simplifies the process of provisioning new storage in the cloud, it also reduces risks.

When using self-managed public cloud service providers for backup, provisioning new storage requires a series of cumbersome steps to create an account, define access tiers, select the protection policies, and validate the configuration. This process can introduce gaps in both security and compliance. Veritas Alta Recovery Vault eliminates the complexity and reduces risks. You provision and manage all storage as a service resources using locked-down security and role-based authentication policies. Eliminating separate accounts and user interfaces across cloud providers ensures that security and compliance policies are in check.

And because Veritas Alta Recovery Vault is tightly integrated with NetBackup and Veritas Alta Data Protection, your cloud storage benefits from its same capabilities, including:

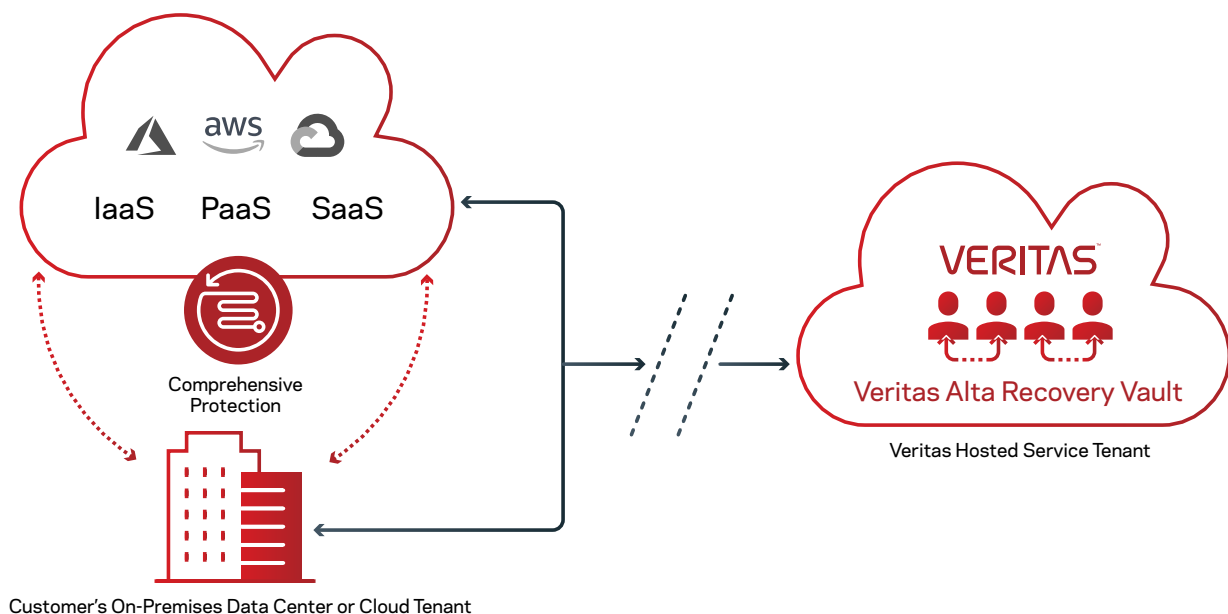

- **Data encryption in transit and at rest**—Ensures compliance and protects data from ransomware and other malicious attacks.
- **AI/ML-based anomaly detection**—Identifies and alerts on unexpected changes to backup data before an event can occur, ensuring that data is always recoverable.
- **Intelligent Cloud Policy Engine**—Abstracts cloud data protection complexity by detecting new workloads and automatically applying protection policies across all major clouds. new storage target.
- **Immutable cloud storage**—Ensuring that backup data is impervious to unauthorized changes and enabling organizations to meet regulatory requirements.

Lowest TCO

Data growth is exceeding forecasts, and backup to the cloud can be a complex, slow and expensive over-budget experience. Veritas Alta Recovery Vault turns the challenging processes of enterprise cloud data protection into an automatic and seamless practice.

Recovery Vault effortlessly scales protection across the hybrid cloud while controlling costs, so you can:

- Eliminate being blindsided by big cloud bills from unexpected data ingress and egress fees
- Streamline operations with automation and consolidated management
- Pay for only what's used with a pay-as-you-go subscription service
- Minimize costs while improving SLAs with client-side compression and deduplication that reduces the amount of data sent, stored and retrieved from the cloud, saving both money and time

Veritas Alta Recovery Vault offers a single, flexible repository for all your data sources—from on-premises to your public cloud workloads. From fast provisioning to integrated reporting and trending analysis on storage consumption plus the value of a single vendor for technical support for your entire data protection solution, Veritas Alta Recovery Vault ensures the lowest overall total cost of ownership (TCO) for your organization.

Learn More

Veritas has over 15 years of experience in SaaS solutions and has been ranked a Leader in the Gartner Magic Quadrant for Enterprise Backup & Recovery for 17 years running. We've helped the largest companies protect their data from the edge to the core and the cloud, and we welcome the opportunity to work with you.

Veritas Alta Recovery Vault is available as a simple, subscription-based license in one, or three-year increments. You have a choice of multiple back-end cloud providers, along with the choice of standard tier or archive tier storage—giving you the flexibility to choose the recovery time and cost structure that best fits your organization's needs.

About Veritas

Veritas Technologies is a leader in multi-cloud data management. Over 80,000 customers—including 95 percent of the Fortune 100—rely on Veritas to help ensure the protection, recoverability, and compliance of their data. Veritas has a reputation for reliability at scale, which delivers the resilience its customers need against the disruptions threatened by cyberattacks, like ransomware. No other vendor is able to match the ability of Veritas to execute, with support for 800+ data sources, 100+ operating systems, 1,400+ storage targets, and 60+ clouds through a single, unified approach. Powered by Cloud Scale Technology, Veritas is delivering today on its strategy for Autonomous Data Management that reduces operational overhead while delivering greater value.

The Veritas logo consists of the word "VERITAS" in a bold, red, sans-serif font. A thin vertical line is positioned to the left of the text.
