# ENERGY MONITORING WITH CISCO KINETIC
## Proof of Value Solution Bundle

According to Gartner, 77% of manufacturers say that energy efficiency is a critical success factor for their business. Unfortunately, many plant operators have almost no visibility to how much electricity is consumed by a given production line or specific machines within the plant facility.

*Cisco Kinetic for Manufacturing* is an IoT Data Fabric platform that gives factory operators the ability to monitor the location, state and utilization of connected assets from a single, consolidated view. Relative to energy management, Kinetic enables manufacturers to monitor energy use with granular visibility into consumption by machine, line, area and floor.

CDW's Proof of Value solution for **Energy Monitoring with Cisco Kinetic** is designed to help quickly prove out on a small scale the value of proactively monitoring energy consumption using industrial Internet of Things (IIoT) technologies.
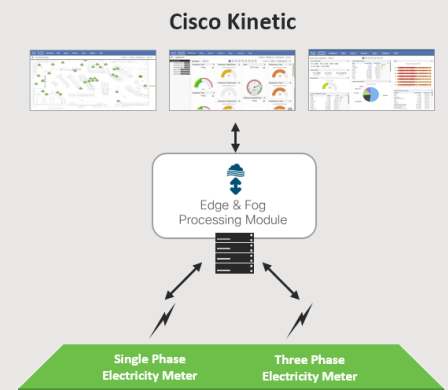

Features and Benefits:

- Real–time visibility and alerting of energy use with drill–down view by process, product family and items

- Policy automation to improve energy optimization: identify leaks, inefficient machines, peak loads

- Easy–to–use, accurate cost reporting for compliance

- Enables monitoring of both single– and three–phase power circuits

- Cisco Kinetic's open API allows integration with existing manufacturing workflow applications and data analytics tools

- Can be deployed and delivering operational insight in less than 2 weeks

This Proof of Value solution has been designed to help you quickly implement and evaluate Cisco Kinetic under real–world conditions with a minimal up–front investment, and can be easily upgraded and expanded to support a plantwide deployment when you are ready to take that step forward.

## WHAT'S INCLUDED

▶ **Cisco Kinetic Energy Monitoring Starter Bundle**, including:

- Cisco Kinetic IoT Data Connect, Real Time Visualization, and Edge & Fog Processing Software (6-month term subscription)

- Single– and three–phase iSockets electricity meters (total of 8)

▶ **CDW Implementation Services**

**Cisco Kinetic**

▶ Starting at $35,000*

*\* This POV solution is customizable and scalable to accommodate your specific requirements.*

**THINK BIG** › **ACT SMALL** › *MOVE FAST*

CDW's Proof of Value (POV) Solutions are designed to do what most Proof of Concepts do not—produce a measurable business outcome in a short amount of time. This helps you make better technology investments while rapidly moving down the path of Digital Transformation of your business.
