CDW Amplified™ Networks Wireless Services Overview

Why CDW – Wireless Services

Clients do not have the time, staff or experience to design, plan and implement a wireless network solution.

Reduced Cost

Clients leverage CDW's field engineering network of over **50** certified engineers to plan, design and deploy your wireless network solution without the costs of performing the work in-house.

Faster Innovation

Clients quickly implement wireless solutions by leveraging CDW's certified and experienced field engineering organization.

Increased Performance

Clients are assured that the wireless networking solution will be designed and implemented based on best practices by an engineering network which has deployed over **$200M** in wireless networking for over **150,000** clients.

Get to Know – Wireless Services

CDW provides wireless services to help clients achieve their desired business outcomes.

Wireless Assessments and Surveys

Leverage CDW's extensive field experience to assess and survey wireless networks of all sizes based on industry best practices.

Cisco 9800 Planning & Design

Leverage CDW's wireless engineers to help migrate or build out a new wireless infrastructure utilizing Cisco's 9800 Wireless LAN Controller.

Wireless Network Implementation

Includes the installation of the network elements along with access point installation to ensure the wireless solution is designed to industry best practices to ensure the solution provides the expected business outcomes.

Get to Know – Wireless Assessment Services

Provides a detailed assessment of an operational wireless solution.

Discovery

The engagement begins with a brief discovery session where the customer communicates the details of what they would like covered as part of the wireless assessment.

Assessment

Review of the wireless infrastructure, architecture and configurations. Typically includes a review of the wireless LAN controller and associated access points.

Vendor Solutions

CDW engineers support Aruba, Cisco and Cisco Meraki wireless assessments which provide recommendations on how to improve the overall network infrastructure.
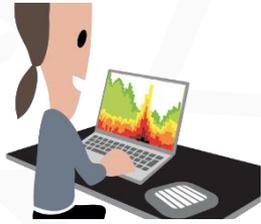

Get to Know – Wireless Surveys

CDW provides clients with information to ensure they can deploy or modify the wireless infrastructure for reliable performance.

Industry Leading Tools

CDW engineers leverage Ekahau Pro with Sidekick surveys to provide the most accurate information to ensure the solution meets the clients expectations based on their environment.

Live & Predictive

CDW engineers perform live and predictive surveys to understand the environment to ensure optimal coverage and performance.

Design

The tools and survey results provide the CDW engineer with the information to review with the client to develop the low level design to be used for the wireless deployment.

Get to Know – Planning & Design

CDW provides services to help clients get the most out of their Cisco 9800 investment.

Cisco Catalyst 9800 Series Wireless Controllers

Discovery

Starts with a discovery session to review the clients existing wireless infrastructure or their requirements and desired business outcomes for their new wireless infrastructure.

Planning

CDW engineers develop a plan for the deployment of the wireless solution which is aligned with the clients objectives.

Design

Following the discovery and planning sessions, the CDW engineer will develop the low level design that will be used to deploy the wireless networking solution.

Get to Know – Wireless Implementation Services

CDW provides services to help clients implement wireless networks.

Flexible Alternatives

Clients can leverage CDW field engineers with any aspect of the implementation required to help to Client meet their goals.

Deployment

CDW engineers can be utilized to deploy the entire solution at client sites to expedite the implementation of wireless networks.

Knowledge Transfer

CDW engineers will transfer design knowledge to the client based off the as built design to allow the client to deploy the design into production.

Get to Know – Managed Services

Provides clients with the monitoring and maintenance of the wireless solution to ensure the solution remains in optimal operation.

Platforms

CDW managed services monitors and maintains Cisco and Cisco Meraki wireless controllers and access points.

24/7/365 Engineering Technical Center

Leverage CDW's deep technical expertise to troubleshoot and remediate issues that may arise with your wireless solution.
