

WE GET THE VALUE OF ASSESSING CLOUD SECURITY.

CDW Amplified™ Information Security Cloud Security Assessment

As organizations' cloud footprints continue to expand, understanding the extent of security issues and prioritizing cloud security risk appropriately remain ever-evolving challenges. Limited budgets, time and expertise make it difficult for organizations to gain a clear picture of their cloud environment and its impact on security. Many organizations turn to tools to manage cloud security risk, but no matter how many tools are purchased, a cloud security program cannot be effective without full visibility into weaknesses across people, processes and technology.

CDW's Cloud Security Assessment can help you achieve:

Reduced Risk

Reliability

Operational Efficiencies

Orchestrating the Right Solution

CDW's Cloud Security Assessment provides you a complete picture of your cloud security risks, strengths and opportunities for improvements. Our cloud security experts combine industry best-practice frameworks with proprietary models, built from years of experience delivering these assessments. Our team uses a combination of automated tooling, manual validation and efficient interviews to gather the necessary information about people, processes and technology across your cloud environment. We then map our findings back to our five cloud categories, which further spans to the domains of the Cloud Security Alliance's Cloud Controls Matrix. We review our observations with you before any deliverables are finalized to ensure accuracy. Once we finalize the deliverable, our team begins performing remediation to create real improvement via applied controls.

SUPPORTED ENVIRONMENTS

CDW GETS CLOUD SECURITY

CDW's proprietary Cloud Security Assessment helps customers to:

- Validate controls implemented in your environment
- Assist in the prioritization of improvement initiatives, including tool selection and rollout
- Perform high-value issue remediation
- Develop a roadmap for long-term strategic program enhancements
- Align controls for uniformity across cloud providers and environments
- Map your future efforts to best practice frameworks, including CIS benchmarks and the CSA CCM
- Secure a greenfield deployment for a new application

Assessment Details

- **Length:** Six to eight weeks
- **Industries:** Manufacturing, Financial Services, Retail, Energy, Technology, Healthcare, Nonprofit
- **Frameworks:** CSA Cloud Controls Matrix, CIS Benchmarks

CDW's full lifecycle of Services can support your organization no matter where you are on your journey

CDW AMPLIFIED™ SERVICES

Services Overview

The following deliverables and outcomes are included in the Cloud Security Assessment:

Evaluating Cloud Security	CDW Assessment
Assessment Focus Areas	
Configuration of resources	✓
Architecture design and principles	✓
Telemetry for resources and the management plane	✓
Access control and identity management	✓
Governance for risk remediation and management	✓
Deliverables	
Gap assessment report describing key issues identified along with tactical steps for remediation	✓
Technical findings export, including all findings discovered in scans run by our automated tools	✓
Weekly status report updates with accomplishments, next steps and milestone updates	✓
Outcomes	
Immediately remediable findings to reduce the real risk exposure of your environment	✓
Improved understanding of cloud footprint and thematic security opportunities for longer-term initiatives	✓
Enhanced awareness of key cloud security tooling capabilities and optimization points	✓
Reduced real environment exposure and risk	✓
Defined strategic roadmap for organized program improvements	✓

To learn more about the Cloud Security Assessment, contact your account manager or call 800.800.4239.
