

Amazing happens when your business is enabled to innovate faster.

Digital Velocity Factory

Digital transformation drives businesses to demand more and more from their technology teams. Unfortunately, many companies rely on monolithic systems, legacy waterfall processes and too much manual work to be able to innovate quickly.

CDW has created the Digital Velocity Factory to help businesses better understand these principles and develop a roadmap paving the way for success. Designed as a “system for changing systems,” our Digital Velocity Factory can help your business deliver features and functionality at a faster pace, with higher customer and employee satisfaction and fewer defects and security vulnerabilities. This solution infuses Lean-Agile principles into a company’s culture, organizational design, funding and flow of work while applying DevSecOps automation and cloud native technology and best practices.

Our Digital Velocity Factory solution can help you achieve:

Organizational
agility

Modernized applications
and platforms

Automated operations,
freeing up valuable time

Transforming Legacy Systems Into Value

Many times, leaders may think the solution to their problem is to spend heavily on new technology, hiring people or turning to a subcontractor to take over the mess.

With CDW’s Digital Velocity Factory, you can meet your application and product development time-to-market goals; improve the quality of your applications and products; modernize monolithic and legacy technology to be cloud-native; and introduce automation to help you integrate, deploy and test your applications and products so you can go to market more securely and efficiently with less risk.
