

DESIGNED FOR K12 AND HIGHER EDUCATION CAMPUSES

ENERGY MONITORING WITH CISCO KINETIC Proof of Value Solution Bundle

According to a survey of over 300 educational institutions, energy-saving initiatives represent one of the largest areas of opportunity to reduce or control operational expenditures. The unfortunate reality is that many schools have almost no visibility into how much electricity is consumed by any given piece of facilities equipment or buildings within the school district or campus.

Cisco Kinetic is an IoT Data Fabric platform that gives facilities operators the ability to monitor the location, state, and utilization of various connected assets from a single, consolidated view. Relative to energy management, Kinetic enables schools to monitor energy use with granular visibility into consumption by equipment, department, building and campus location.

CDW's Proof of Value solution for Energy Monitoring with Cisco Kinetic is designed to help quickly prove out on a small scale the value of proactively monitoring energy consumption using Internet of Things (IoT) technologies.

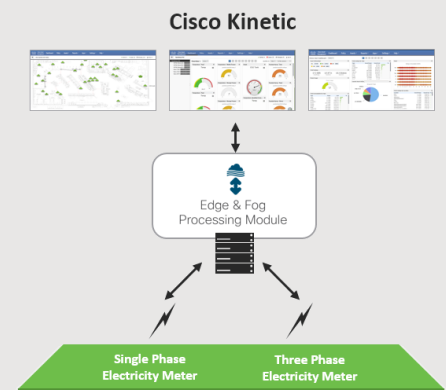

Features and Benefits:

- Real-time visibility and alerting of energy use with drill-down view by equipment, department, building and campus
- Policy automation to improve energy optimization by identifying inefficient equipment and peak loads
- Easy-to-use, accurate cost reporting for compliance
- Enables monitoring of both single- and three-phase power circuits
- Cisco Kinetic's open API allows integration with existing workflow applications and data analytics tools
- Can be deployed and delivering operational insight in less than 2 weeks

This Proof of Value solution has been designed to help you quickly implement and evaluate Cisco Kinetic under real-world conditions with a minimal up-front investment, and can be easily upgraded and expanded to support a campus-wide or district-wide deployment when you are ready to take that step forward.

WHAT'S INCLUDED

- ▶ Cisco Kinetic Energy Monitoring Starter Bundle, including:
 - Cisco Kinetic IoT Data Connect, Real Time Visualization, and Edge & Fog Processing Software (6-month term subscription)
 - Single- and three-phase iSockets electricity meters (total of 8)
- ▶ CDW Implementation Services

- ▶ Starting at \$35,000*

** This POV solution is customizable and scalable to accommodate your specific requirements.*

THINK BIG › **ACT SMALL** › **MOVE FAST**

CDW's Proof of Value (POV) Solutions are designed to do what most Proof of Concepts do not—produce a measurable business outcome in a short amount of time. This helps you make better technology investments while rapidly moving down the path of Digital Transformation of your business.
