Privileged User Access Simplified

CDW's Privileged Access Management (PAM) Solutions

Focused on securing and controlling access to sensitive systems, applications and data, privileged access management (PAM) solutions help manage, monitor and audit privileged user activities to prevent data breaches and insider threats.

Privileged access management (PAM) solutions can help you:

Control and monitor privileged user access.	Reduce the risk of insider threats.	Improve compliance and audit readiness.

Building the Right Solution

Protecting critical data and mitigating risks associated with privileged accounts starts with a strong PAM strategy. Implementing PAM solutions enables enforcement of least privilege access policies, enhanced visibility into privileged account usage and improved data security posture. CDW's team of PAM experts can help your organization design a solution that fits your business's unique needs by:

• Determining the specific roles and privileges that each user should have within your organization's systems and applications.

• Implementing a centralized platform that can manage and control access to sensitive information, such as PAM software or identity and access management (IAM) solutions.

• Regularly reviewing and auditing access controls to ensure that only authorized users have the necessary permissions — and revoking access for employees who no longer require it.

Why CDW

With a proven track record of successfully implementing privileged access management solutions for organizations in a wide variety of industries, CDW offers a comprehensive suite of PAM solutions and services. Partnering with industry-leading technology vendors to ensure that our solutions are built on the most effective security technologies available, we tailor our PAM solutions to meet the specific business needs of each organization.

1. CDW has a dedicated team of highly skilled cybersecurity professionals with the knowledge and experience to design, implement and effectively manage PAM solutions of all sizes.
2. We provide ongoing support and monitoring of PAM solutions to ensure that it remains current and continues to meet necessary security requirements.
3. We offer training and educational resources to help organizations understand the importance of PAM and learn more about effectively utilizing the solution.
4. Our customer-centric approach involves working closely with organizations to understand their unique security challenges and develop a PAM solution aligned to their business goals.

Assess
CDW experts will help you evaluate your current environment, along with health checks, IT consulting and other data mitigation assessments.

Design
CDW will help you find the technologies that work best for your organization and the goals you set out to achieve.

Deploy
From hardware, racks and servers to data migration, asset tagging and tracking, CDW will be there to ensure your deployment runs smoothly.

Manage
Monitoring, maintenance, reporting and incident management are crucial to a healthy data center. CDW's managed services team is there to help.

Benefits of PAM Solutions

CDW's complete portfolio of solutions can support PAM programs of any size, level of maturity or architectural design (cloud, hybrid, on premises). We offer support at any phase of the lifecycle, from initial program design to long-term management and support. Potential benefits of PAM solutions include:

Business Priority	Solution
Improved security	By implementing strict policies, monitoring user activity and providing detailed audit logs, PAM solutions reduce the likelihood of data breaches while helping maintain compliance with industry regulations. Additionally, PAM solutions can automate password management, rotation and vaulting to prevent credential misuse and ensure that only authorized individuals have access to privileged accounts.
Compliance	PAM solutions help ensure compliance by allowing organizations to control and monitor privileged accounts and access to sensitive data. With detailed audit trails and reporting capabilities, your organization can easily track and monitor privileged user activity, better enforce least privilege access, authenticate users and more, allowing for compliance with regulations and standards such as GDPR, PCI DSS, and HIPAA.
Efficiency	PAM solutions help improve operational efficiency by increasing visibility, control and security over privileged accounts. By implementing strict controls and policies around privileged accounts, PAM solutions also help streamline the process of granting and revoking access, making it easier for IT teams to quickly respond to changing business needs and compliance requirements.

Checklist of Questions

1. How does your current privileged access management solution authenticate users before granting access to sensitive systems and data?

2. Can your PAM solution automatically rotate or reset passwords for privileged accounts on a regular basis?

3. Does your PAM solution provide detailed logging and reporting capabilities to track all privileged account activity?

4. How does your PAM solution enforce least privilege access, ensuring that users have only the access they need to perform their jobs?

5. Does your PAM solution support multifactor authentication to add an extra layer of security beyond passwords?

6. Is your current solution able to integrate with existing security tools and systems?
