

Design a stronger security stance with guidance from the experts.

Cybersecurity Workshops

A clear, actionable and forward-looking strategy is one of the most important tools in a security leader's toolbox. But defining that strategy is incredibly challenging, given the wide range of new threats, technologies and regulations emerging each year.

That's why CDW offers half-day and full-day Cybersecurity Workshops for security leaders. We assemble our top experts in a range of domains — from compliance to data governance to Zero Trust to IAM and more — and spend dedicated time with your team to validate strategies, recommend best practices and align with organizational goals and expectations.

Cybersecurity Workshops can help you achieve:

Operational Efficiencies

Reduced Risk

Increased Performance

Finding the Right Solution

Our workshops are tailored to your needs and goals, with subject matter experts from a range of specialty areas. These sessions can be scheduled to kick off the beginning of a strategic planning cycle, to validate an existing plan or to “course correct” in the middle of execution. Each full-day or half-day workshop includes:

- **Expert Panel:** A grouping of experts, tailored to your desired topics of discussion. Workshops can be domain specific or can span the entirety of your cyber strategy.
- **Clear Recommendations:** Our workshops are designed to produce actionable guidance that makes a material improvement in your security program.
- **Fresh Insights:** Our experts are specialists in their fields, giving you the scoop on the newest technologies, best practices in the field and 12-18-month trend predictions.

CDW + CYBERSECURITY EXPERTISE

Our workshops are tailored to your needs and goals, with subject matter experts pulled from the following specialty areas:

- Identity and Access Management (IAM) and Privileged Access Management (PAM)
- Data Governance
- Zero Trust
