

## THREAT CHECK 3.0

## SECURITY

ORCHESTRATED BY CDW

Security is top of mind for every organization. Threats persist and cybercriminals grow savvier. Companies need a better way to proactively detect and defend against network attacks.

Enter CDW's complimentary Threat Check 3.0 assessment, which leverages a device to monitor select portions of your infrastructure to spotlight infected devices, malware, bots, compromised connections and more. Armed with this information, your organization can better assess threats, prioritize your security budgets, and detect malicious network activity that could compromise business operations and put your data at risk.

GUIDANCE**

### The Benefits of CDW's Threat Check 3.0:

CDW's Threat Check 3.0 identifies vulnerabilities on your network and helps prioritize them, and provides the following benefits:

- Rapid deployment: one week to send device, two weeks for the assessment, and 30 days for entire process/no-cost security results review.
- Easy installation: no need to change anything on the network in order to deploy the 3.0 device.
- Hands-off maintenance: configure your switch, install the device, and participate in kickoff and result review calls. We do the rest.
- Buy-in support: identifies active malware/attacks, as well as risky behaviors like webmail and internet file sharing, to garner senior management support for information security investments.
- Nonintrusive monitoring: monitors network traffic in a passive, nonintrusive way, so as not to disrupt operations and so that everything can be wiped after use.

## THE SOLUTION

CDW Threat Check 3.0 brings together the power of Cisco®, Tenable™, Splunk® and Carbon Black® to expose insecure systems and possible network malware. This complimentary service provides tangible evidence and documented support to help you build a case for a more proactive approach to security, and consists of the following components:

### CISCO FIREPOWER THREAT DEFENSE

This next-gen defense service provides threat prevention, anti-malware, URL filtering and application visibility for any enterprise.

### TENABLE NETWORK MONITOR

This passive vulnerability scanner examines network traffic to determine system and protocol vulnerabilities.

### CARBON BLACK RESPONSE

This new, optional component includes an agent that is installed on a selection of workstations to uncover indications of potential malware compromise. The agent monitors running processes on the workstations to help identify potentially malicious software.

### SPLUNK

This new component, a log correlation and analytics tool, is fed the data from Cisco, Tenable and Carbon Black engines and runs analytics against that data to identify trends and anomalies.

## ORCHESTRATING THE SOLUTION

CDW's team of more than 250 solution architects and dedicated Threat Check engineers can leverage the data gathered from a Threat Check assessment to orchestrate a comprehensive solution that addresses your specific security needs.
